HK IFRS 17 · Peer report

2024-12-31 to 2025-12-31 · 31 December year end

Scope: All scopes · 3 insurers

Financial highlights

Balance-sheet composition · Total liabilities + equity = total assets. HKD panels share one amount scale.

Financial Highlights table

Company	Net Assets Growth (%)	Net Profit Growth (%)	CSM Growth (%)	New Business CSM Growth (%)	CSM Amortization Ratio (%)	CSM Replenishment Ratio (%)	Insurance Service Revenue Growth (%)	Net Insurance Contract Liabilities Growth (%)
FWD Life Bermuda	8%	48%	41%	65%	10%	255%	1%	29%
Sun Life Hong Kong	3%	85%	29%	75%	7%	274%	43%	35%
YF Life	**9%**	**42%**	**18%**	**139%**	**7%**	**235%**	**10%**	**19%**

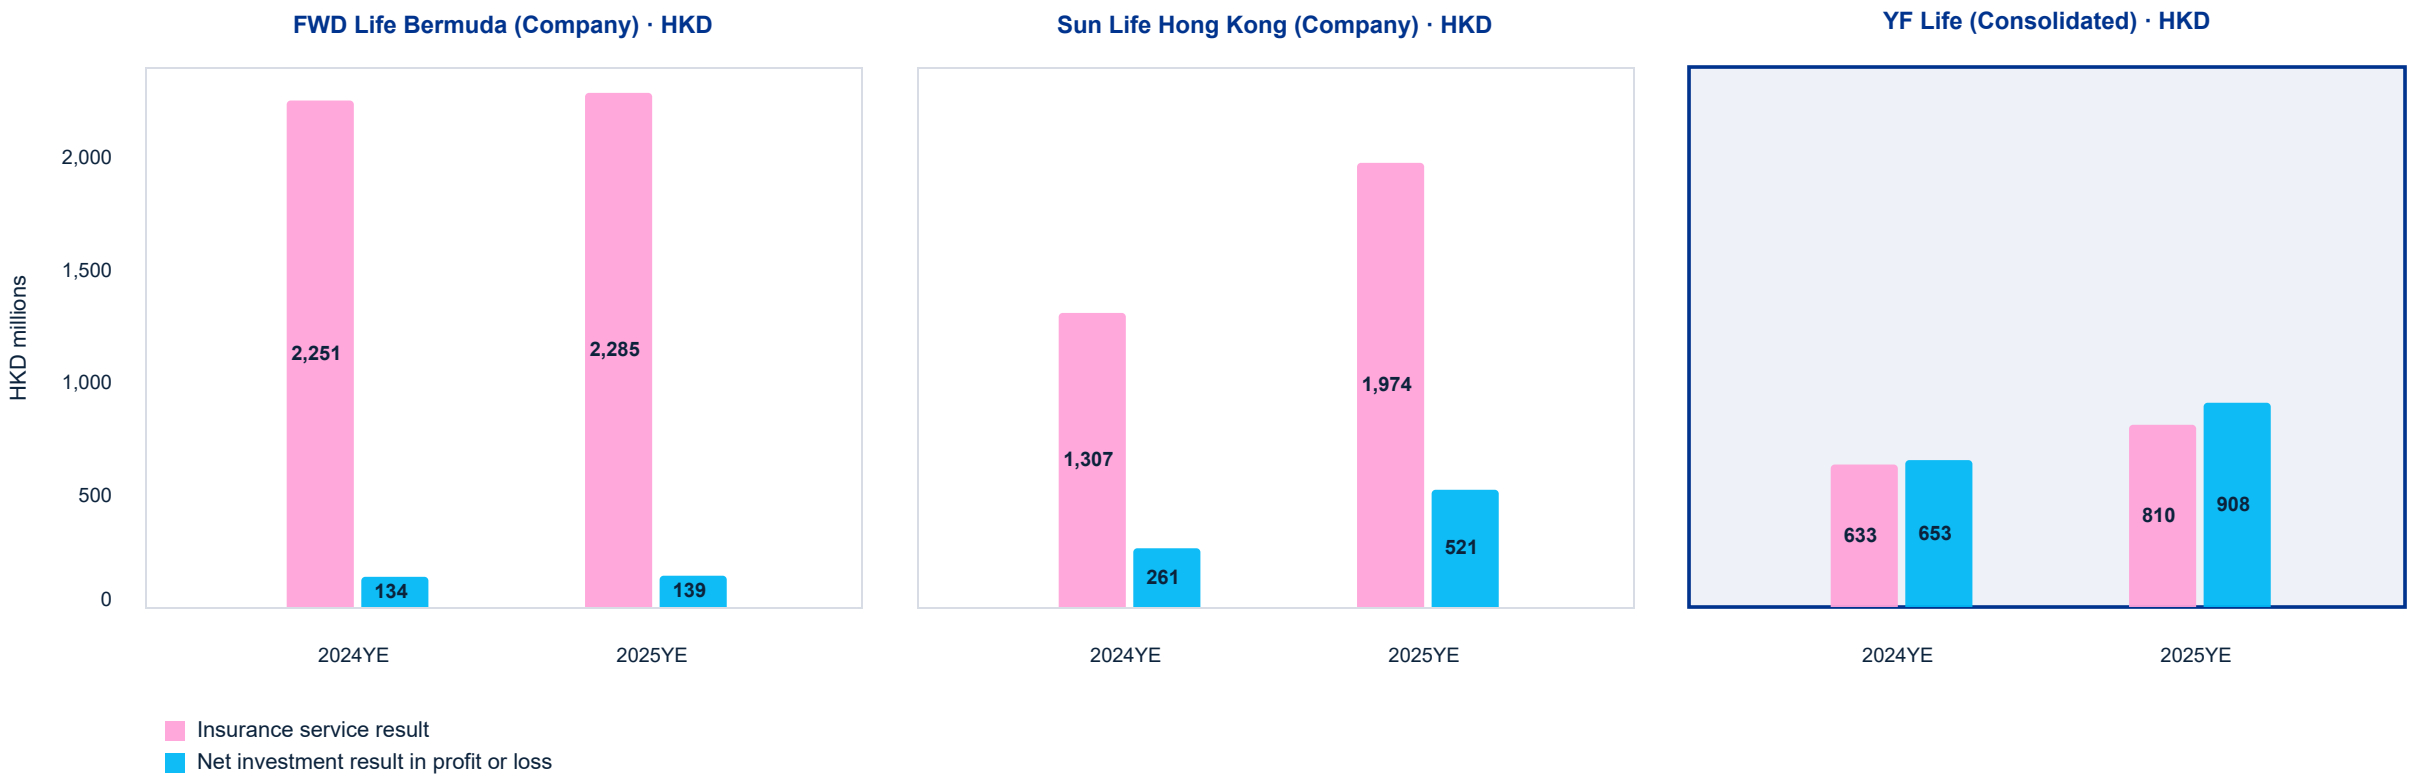

Notes

1. Net Assets Growth (%): Closing net assets / Opening net assets − 1 （2025YE/2025 opening−1）
2. Net Profit Growth (%): Current year profit / Prior year profit − 1 （2025YE/2024YE−1）
3. CSM Growth (%): Current year closing CSM / Prior year closing CSM − 1 （2025YE/2024YE−1）
4. New Business CSM Growth (%): Current year new business CSM / Prior year new business CSM − 1 （2025YE/2024YE−1）
5. CSM Amortization Ratio (%): CSM amortization / CSM before amortization
6. CSM Replenishment Ratio (%): New business CSM / CSM amortization
7. Insurance Service Revenue Growth (%): Current year revenue / Prior year revenue − 1 （2025YE/2024YE−1）
8. Net Insurance Contract Liabilities Growth (%): Current year net liabilities / Prior year net liabilities − 1 （2025YE/2024YE−1）

Sun Life Hong Kong year-on-year figures use unaudited 2024 company comparatives in its 2025 filing; 2024 consolidated figures are excluded from this calculation.

YF Life CSM amortization combines the fair-value-transition and other-contract CSM release lines in the insurance note.

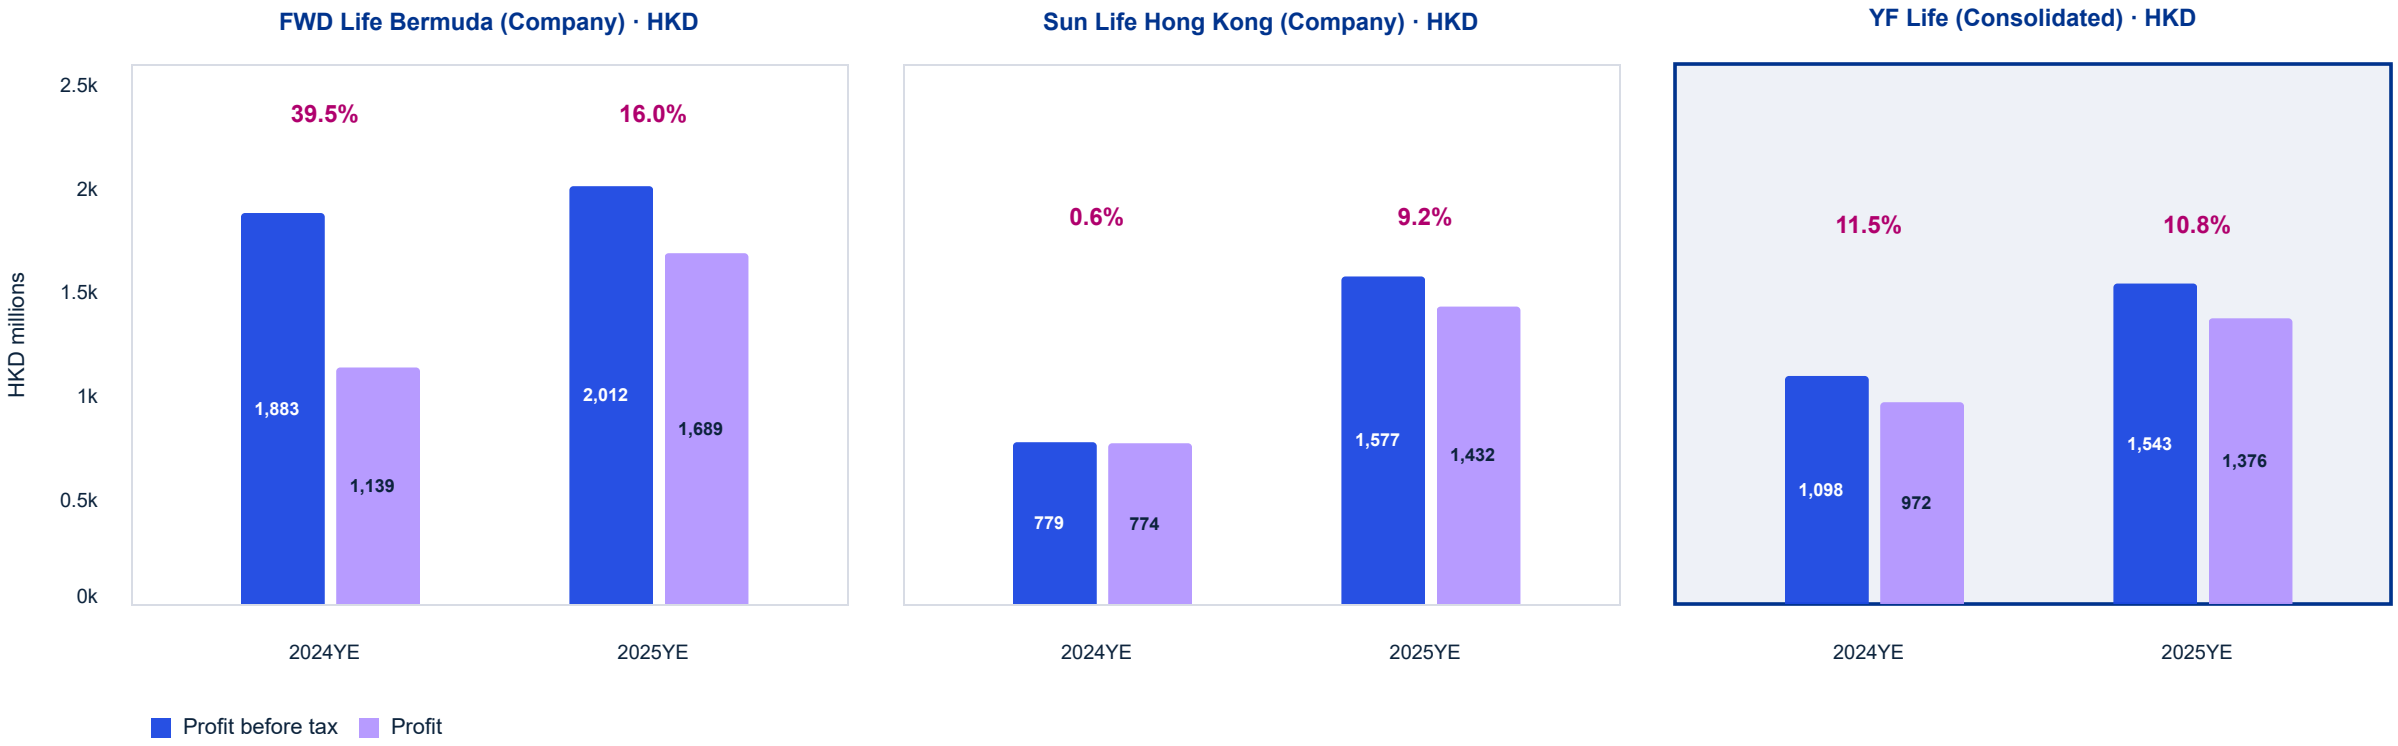

Insurance service and reported net investment results

These are distinct reported results, not a complete decomposition of net profit.

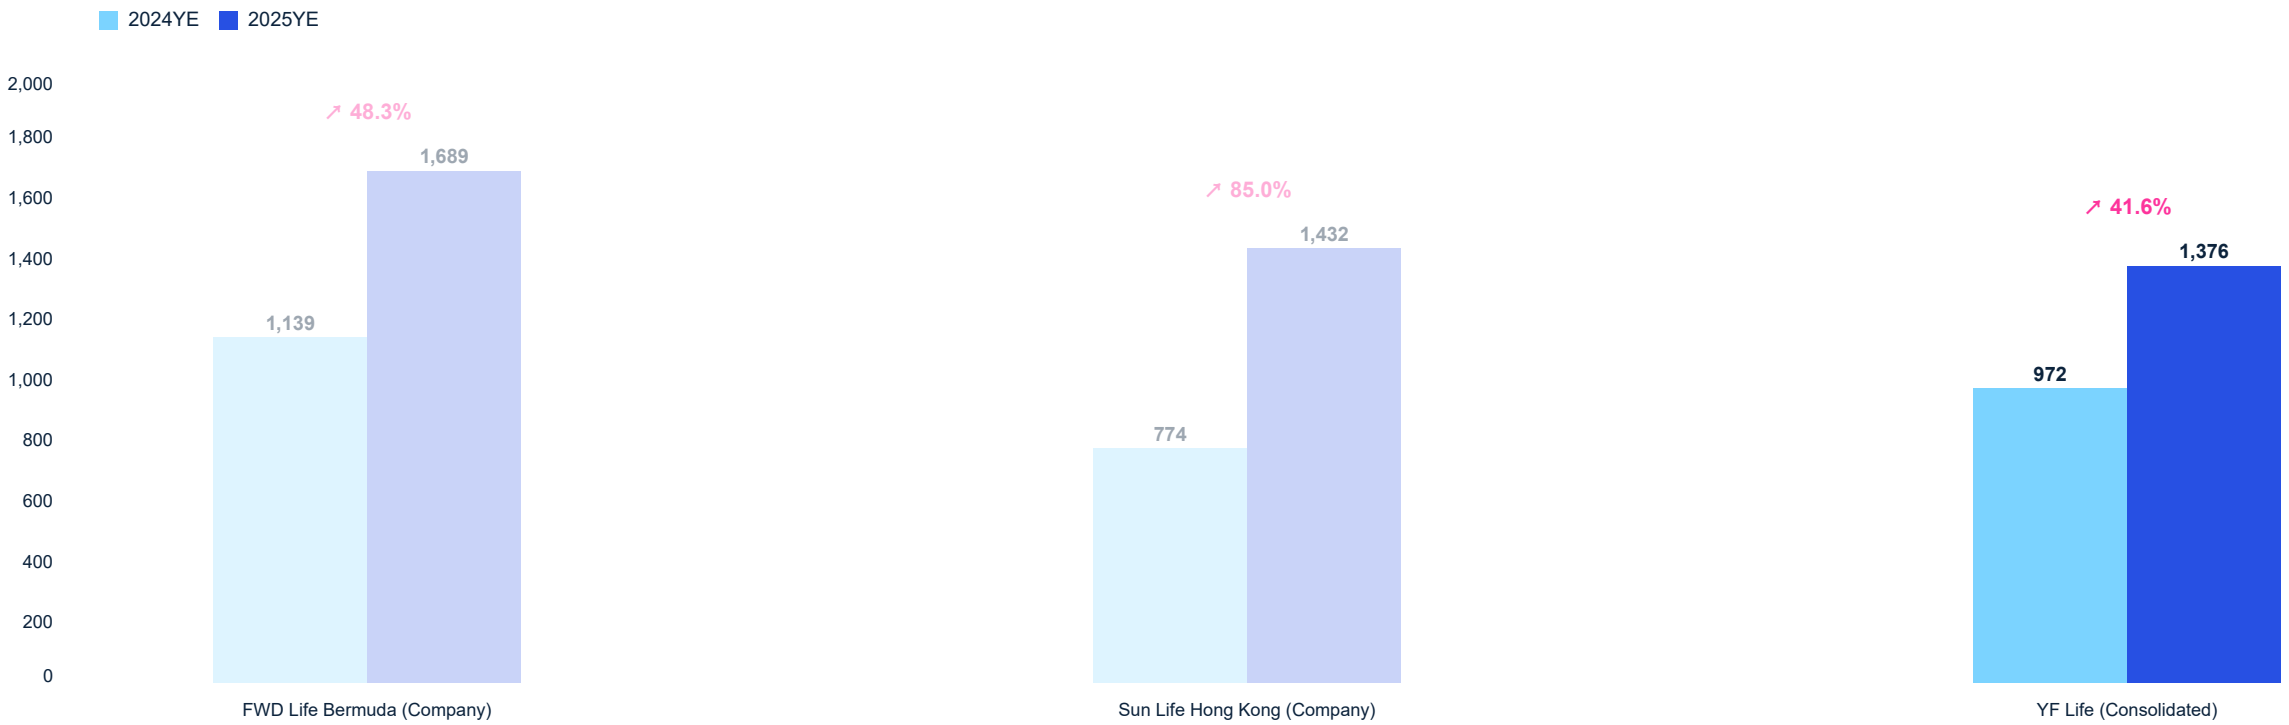

Pre-tax profit, net profit and effective tax rate

Profit for the year = profit before tax + income tax expense (recorded as a negative amount). Effective tax rate = −income tax expense / profit before tax, where pre-tax profit is positive.

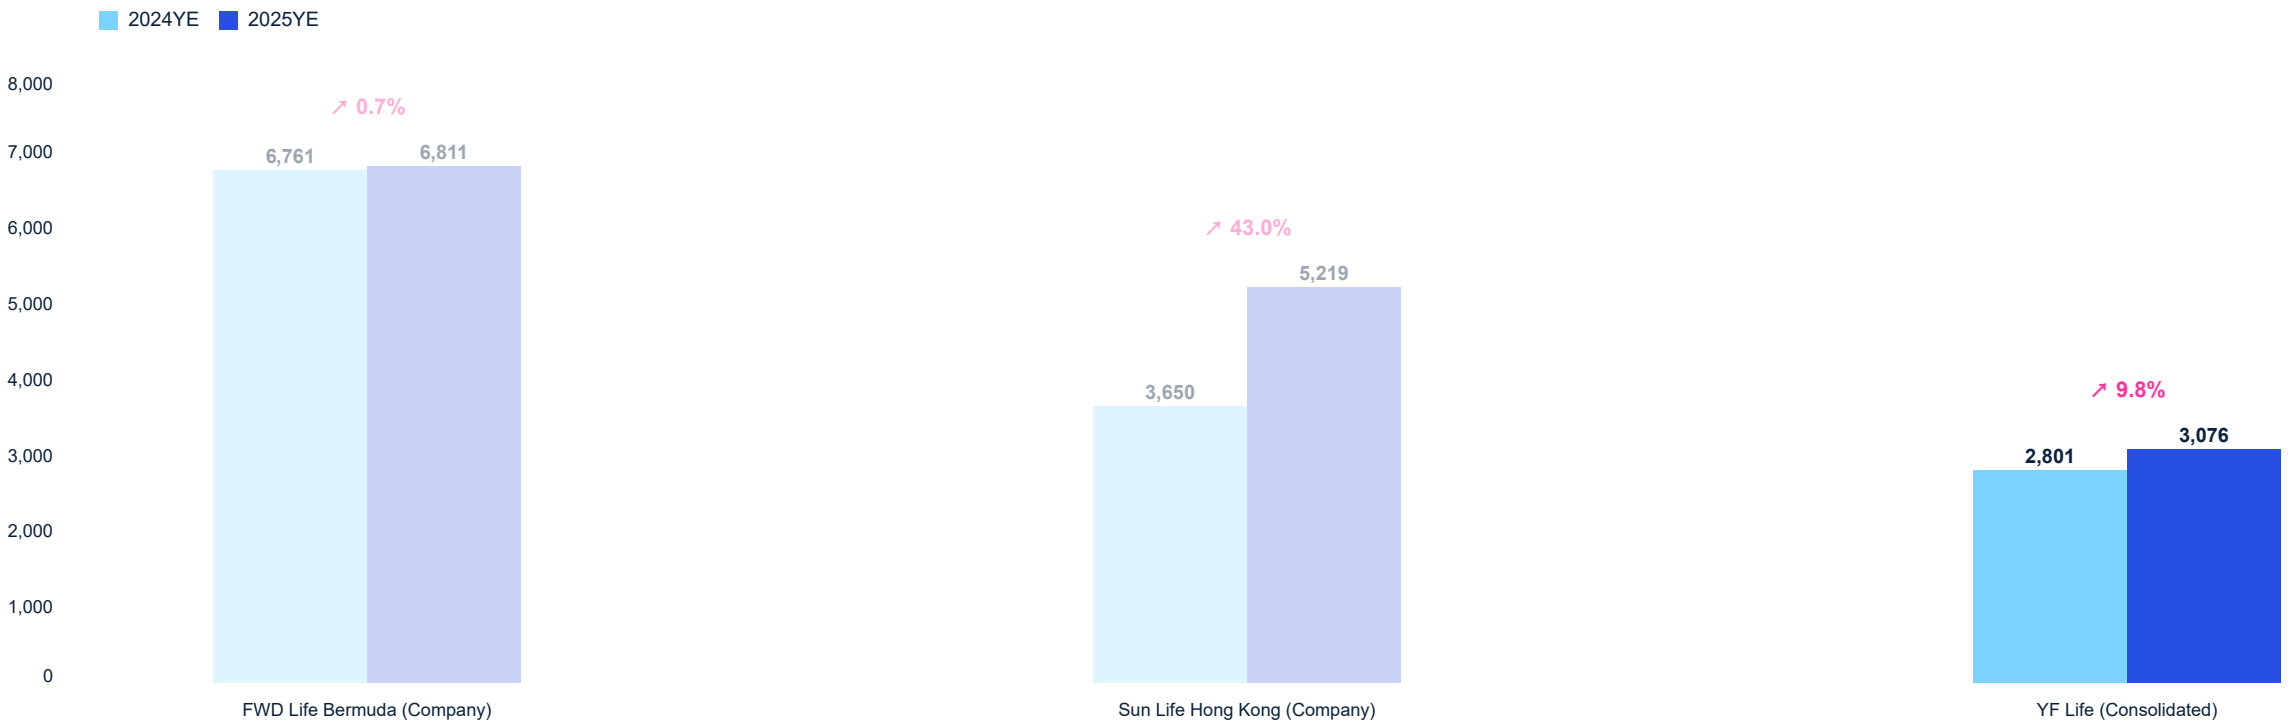

Profit for the year

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

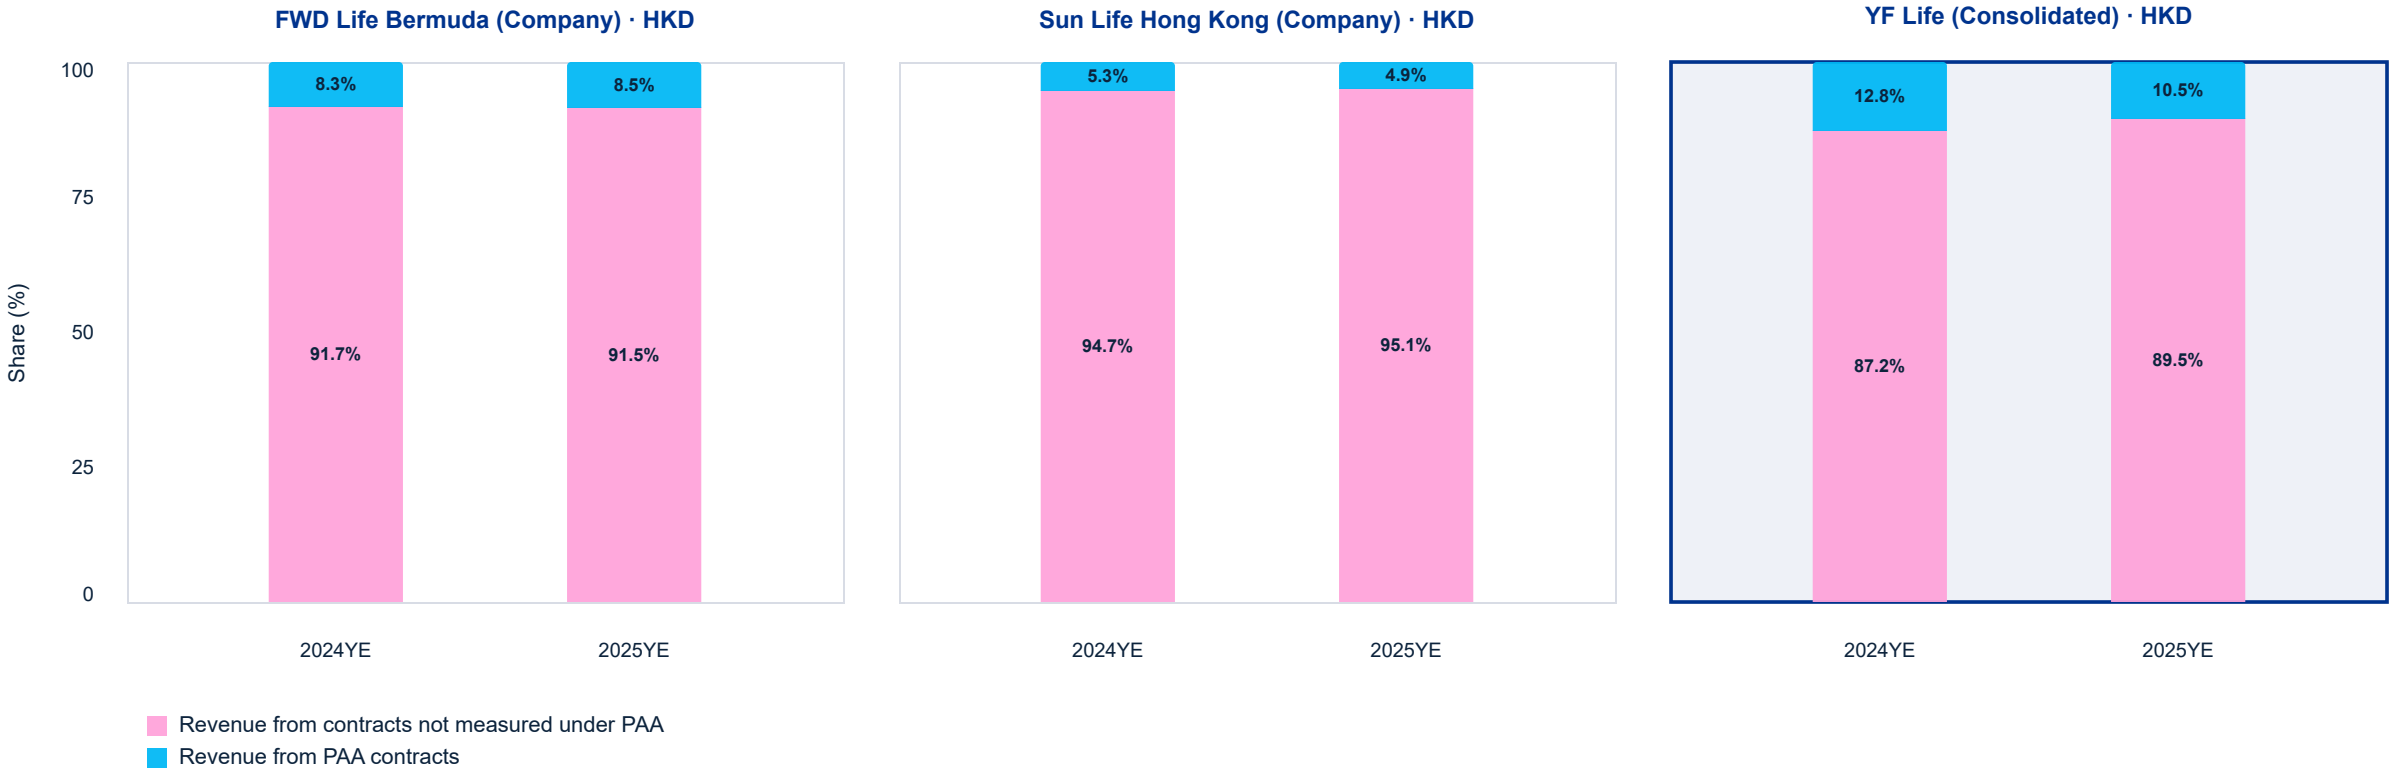

Insurance revenue

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

Insurance revenue shares: PAA vs non-PAA

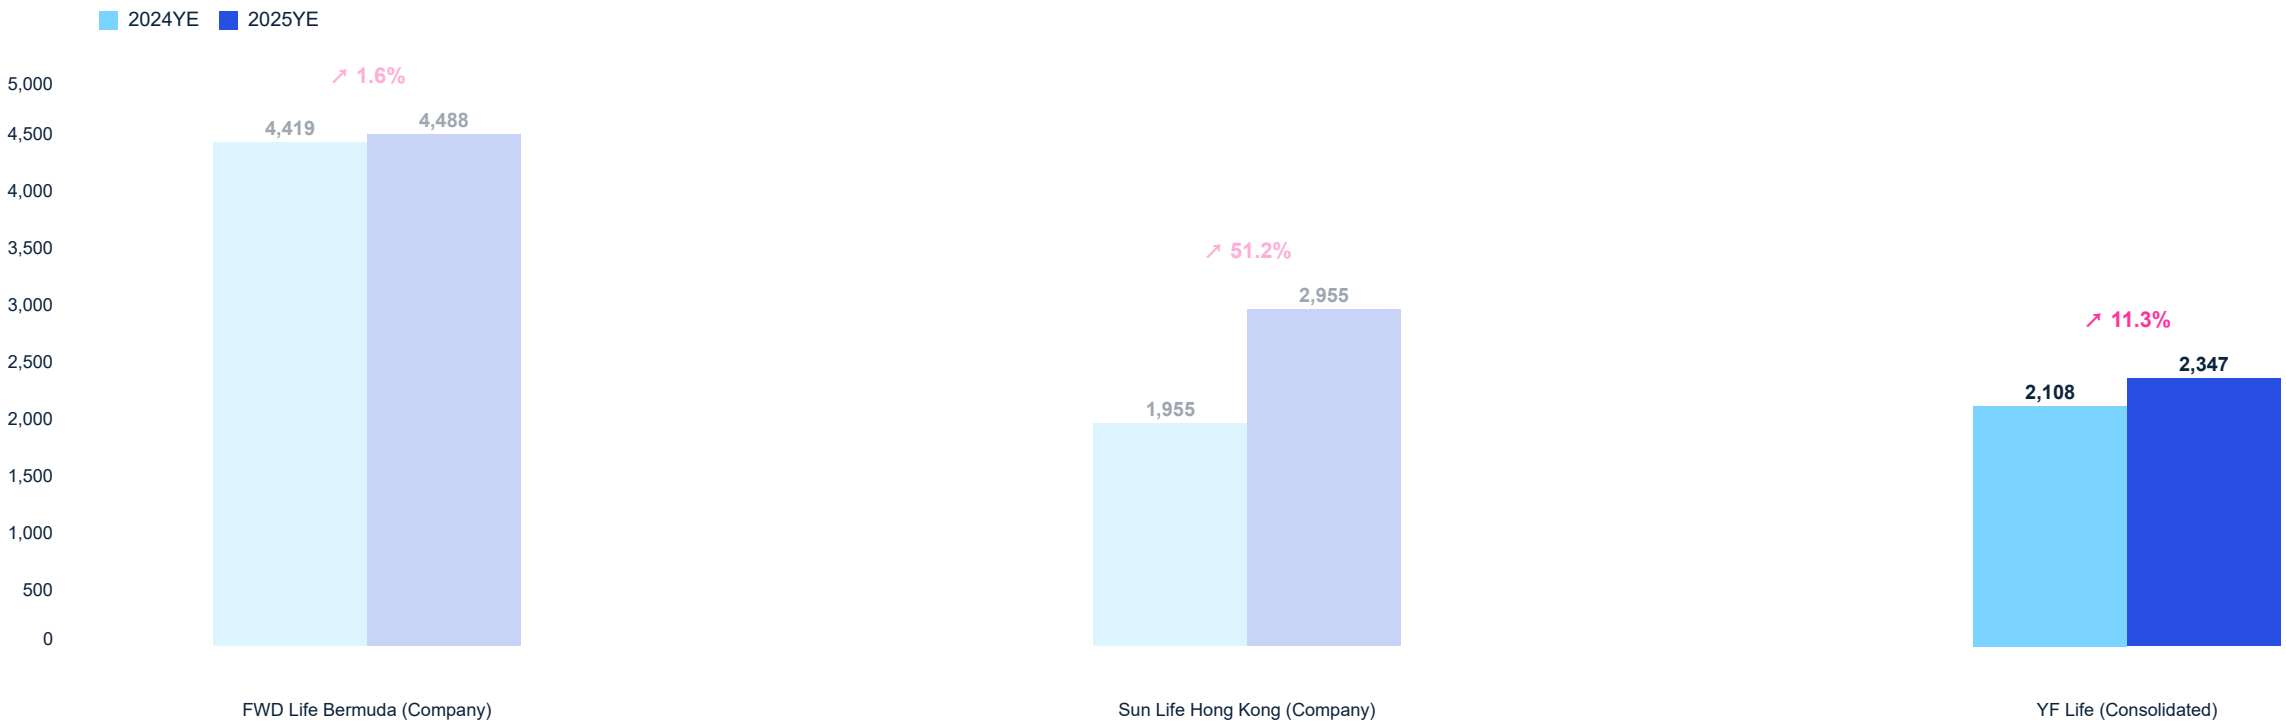

Non-PAA insurance revenue composition

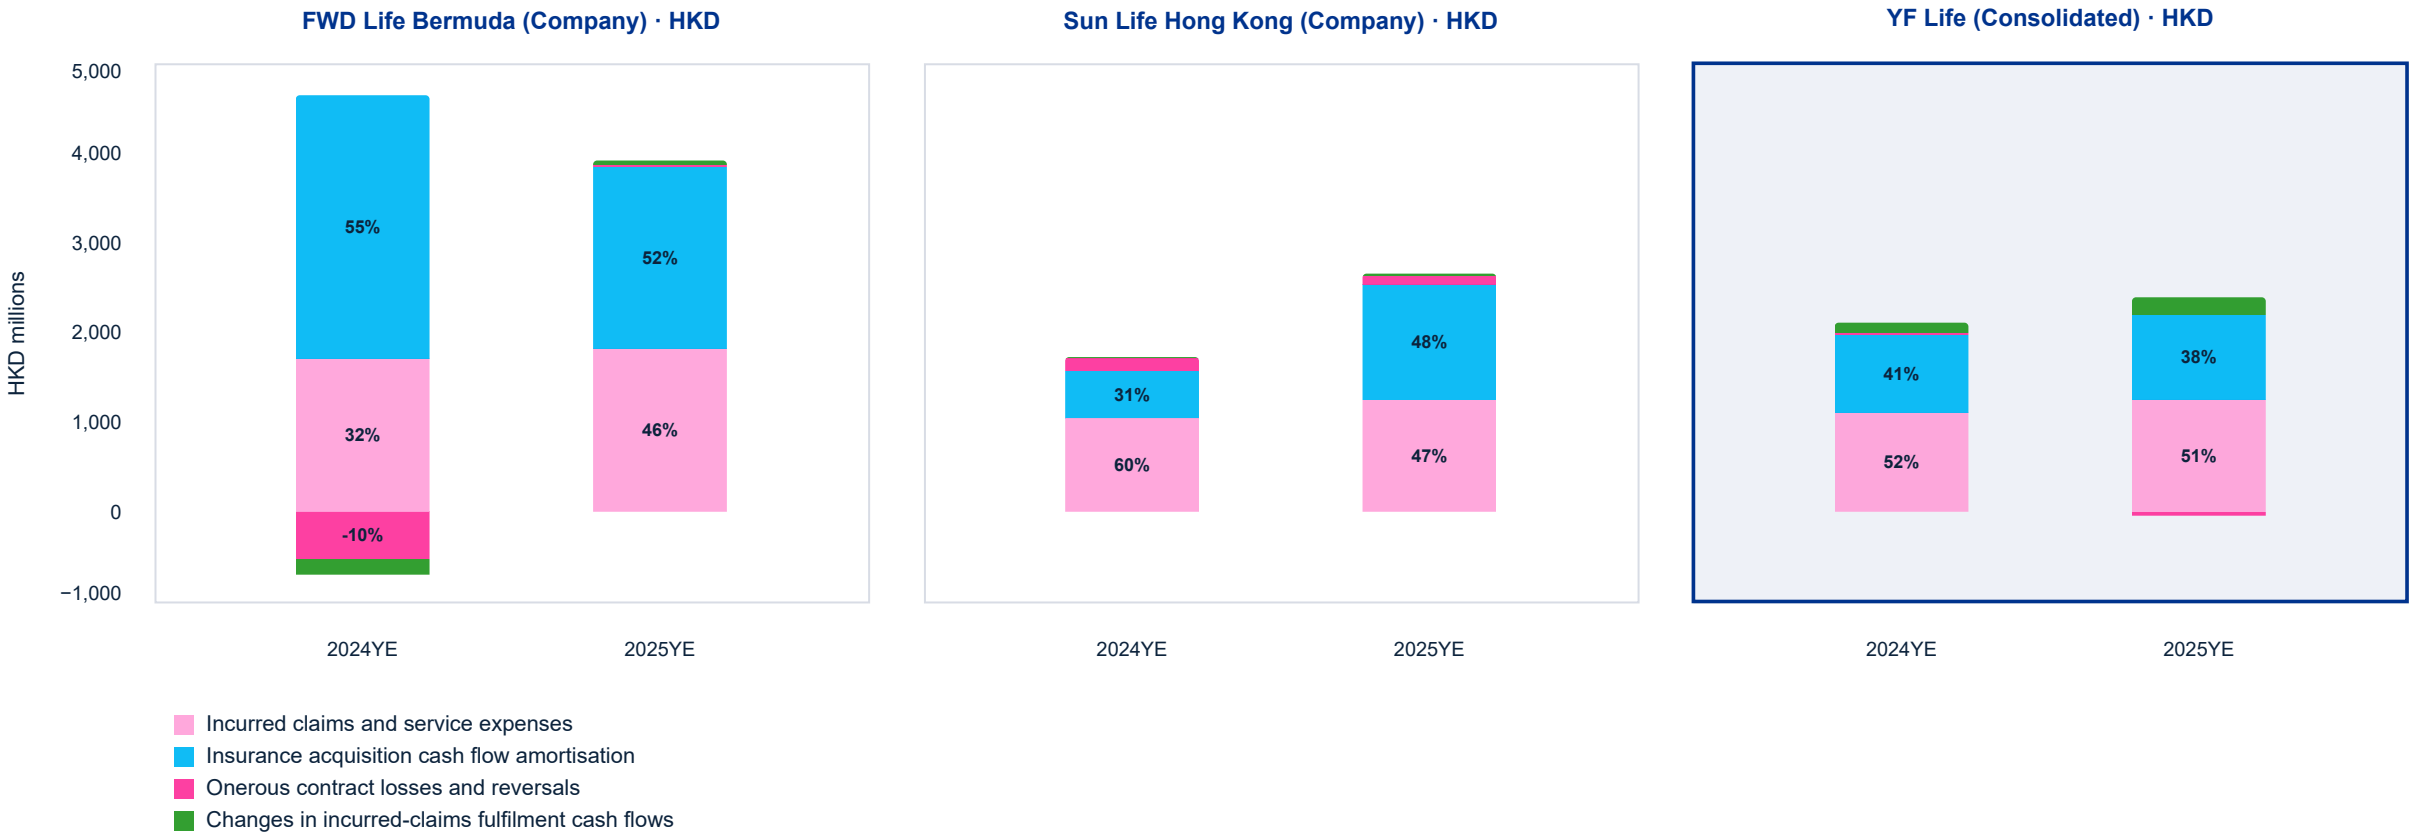

Insurance service expenses

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

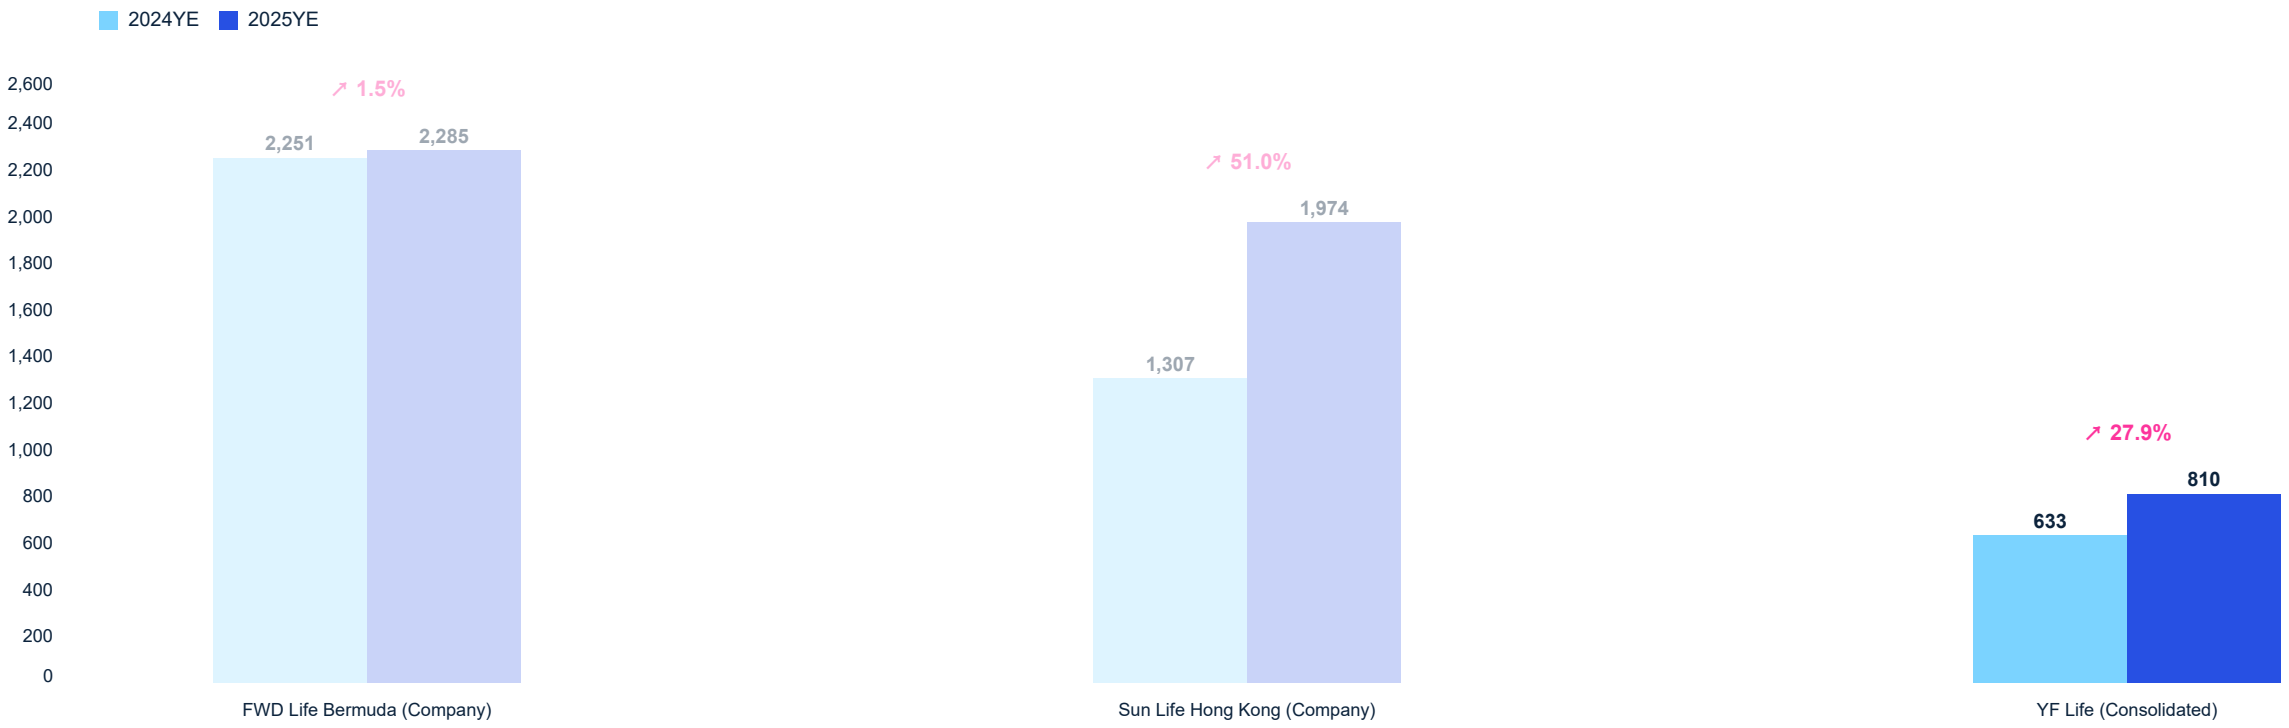

Non-PAA insurance service expense composition

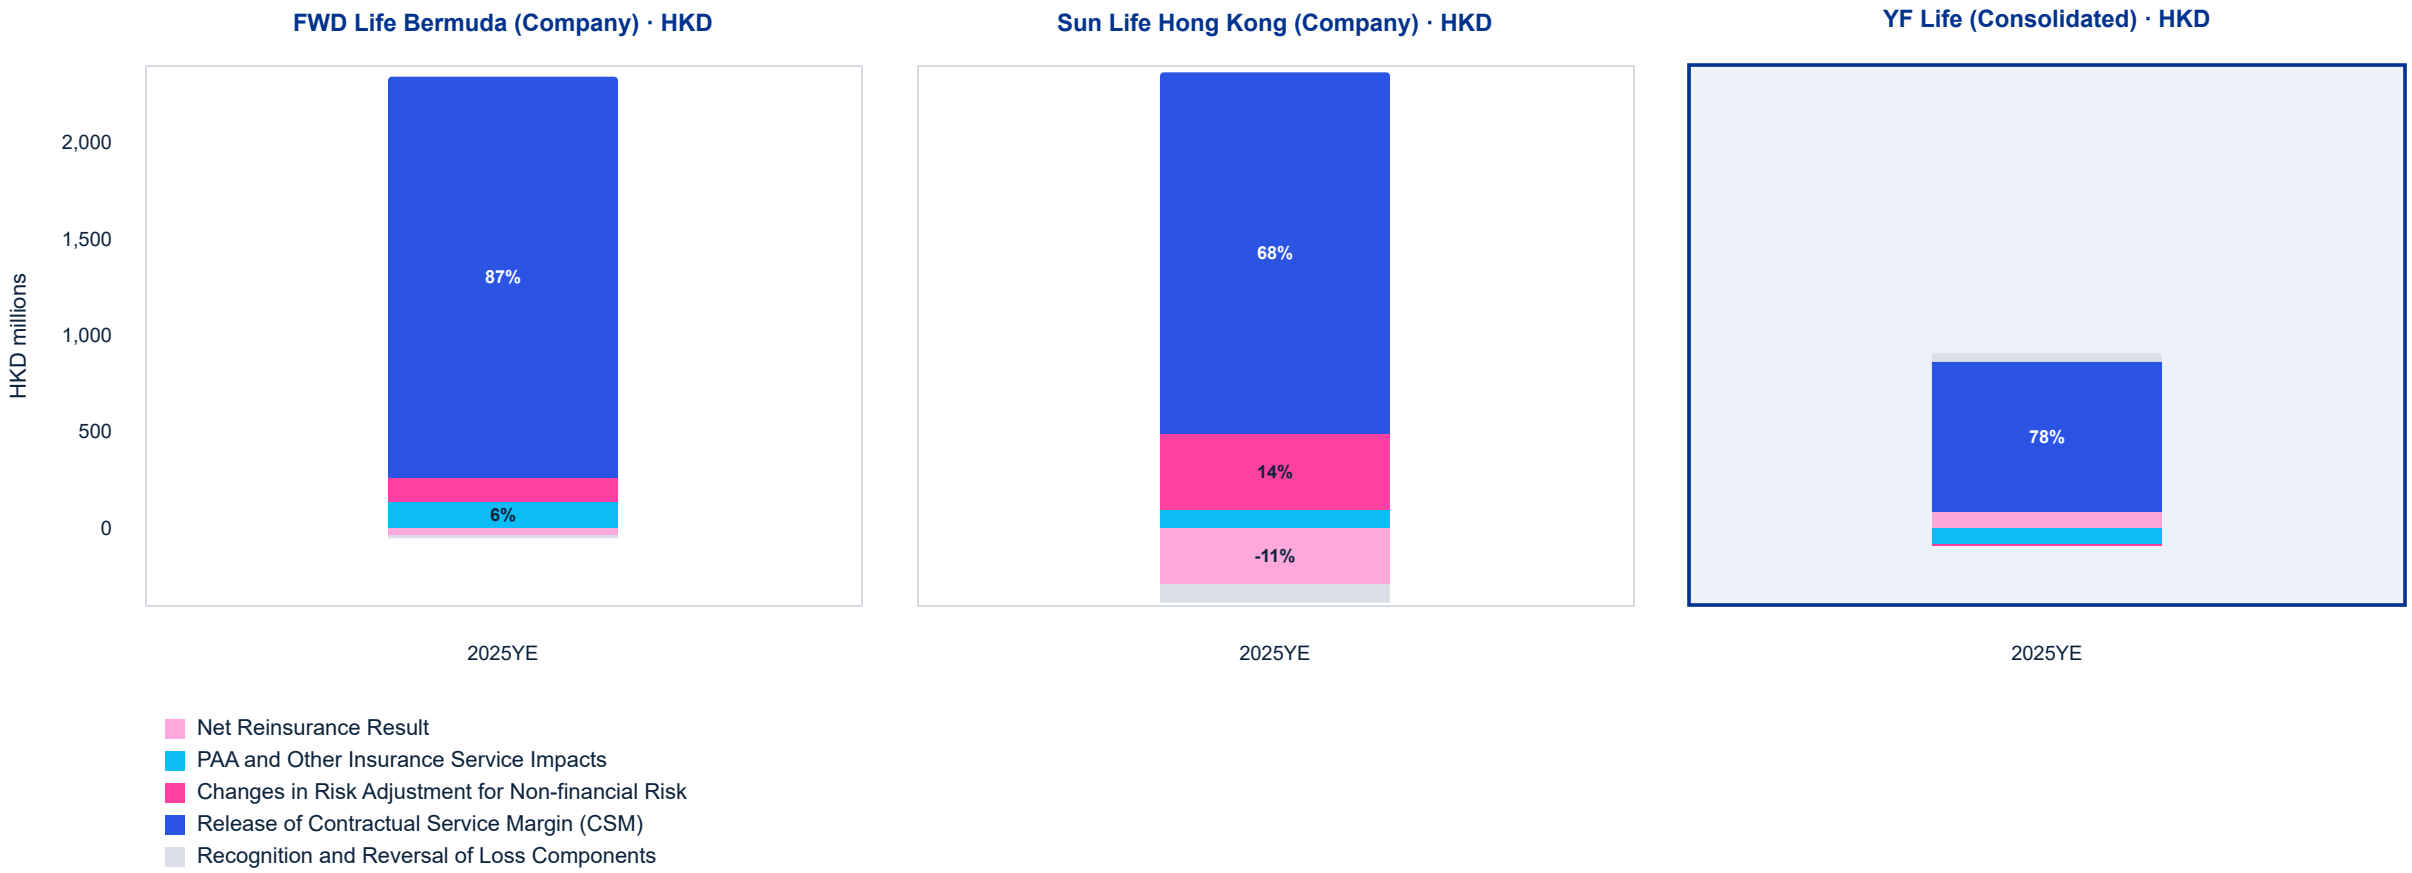

Insurance service result

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

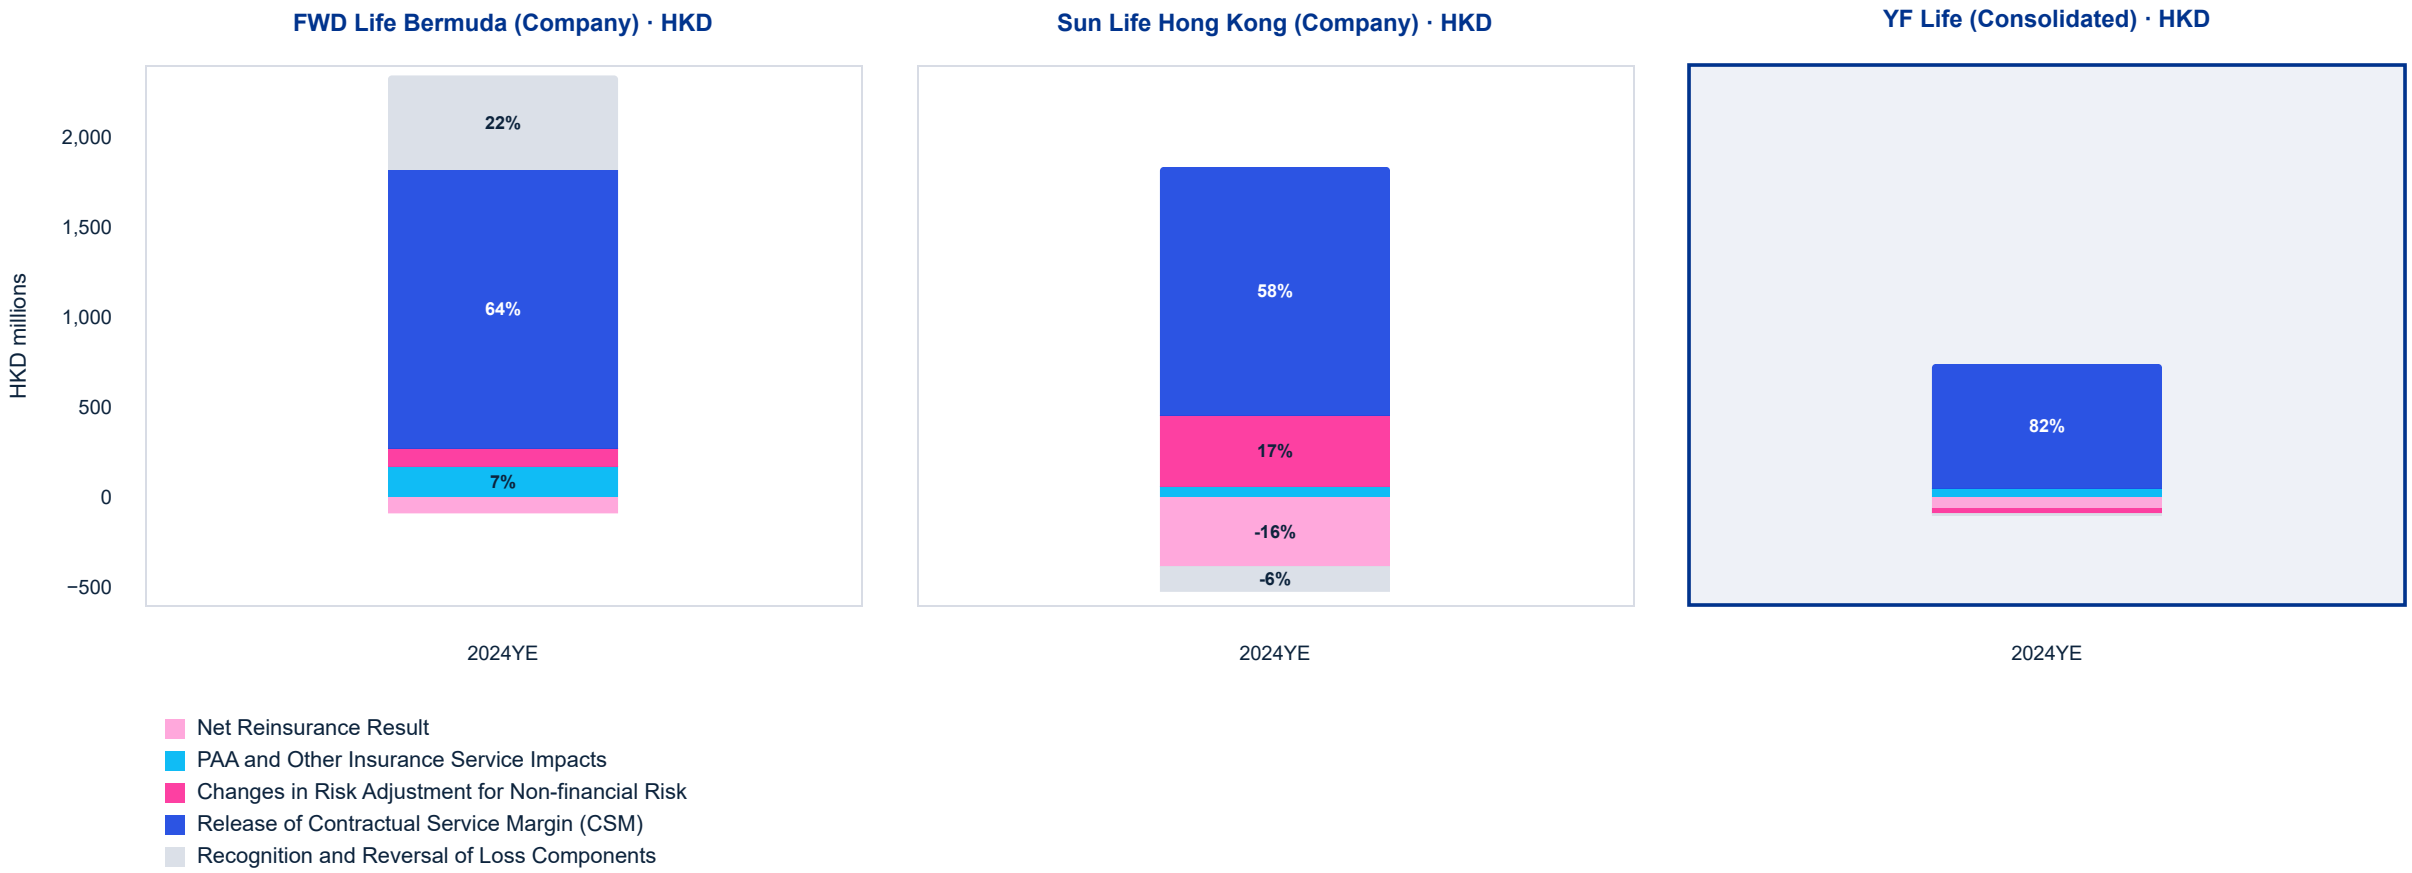

Current-year insurance service result components

FWD Life Bermuda and Sun Life Hong Kong: the combined segment can be traced to disclosed PAA revenue and expense and non-PAA revenue and expense. The other effect is calculated after removing risk adjustment, CSM release and loss components.

YF: the PAA and other segment is a formula-derived combined residual (2025: HKD −86.349 million); it is not a separately disclosed PAA net result.

Comparative insurance service result components

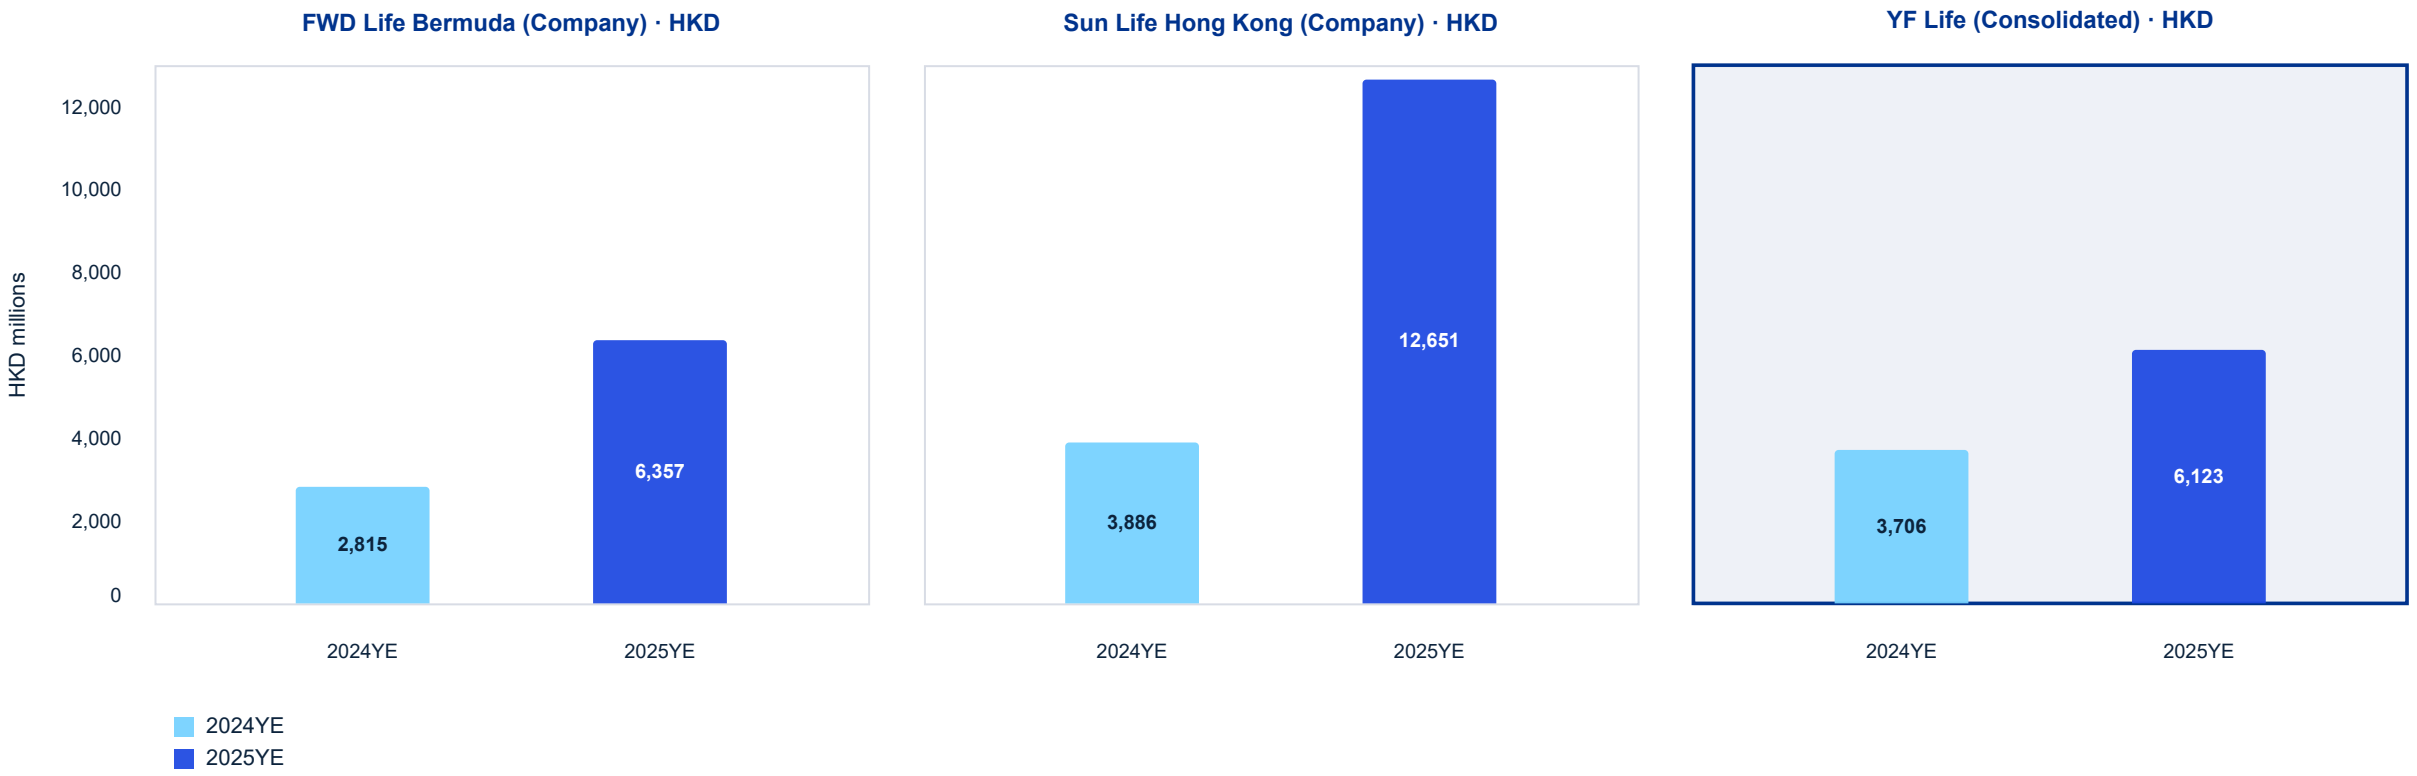

FWD Life Bermuda and Sun Life Hong Kong: the combined segment can be traced to disclosed PAA revenue and expense and non-PAA revenue and expense. The other effect is calculated after removing risk adjustment, CSM release and loss components.

YF: the PAA and other segment is a formula-derived combined residual (2024: HKD 46.680 million); it is not a separately disclosed PAA net result.

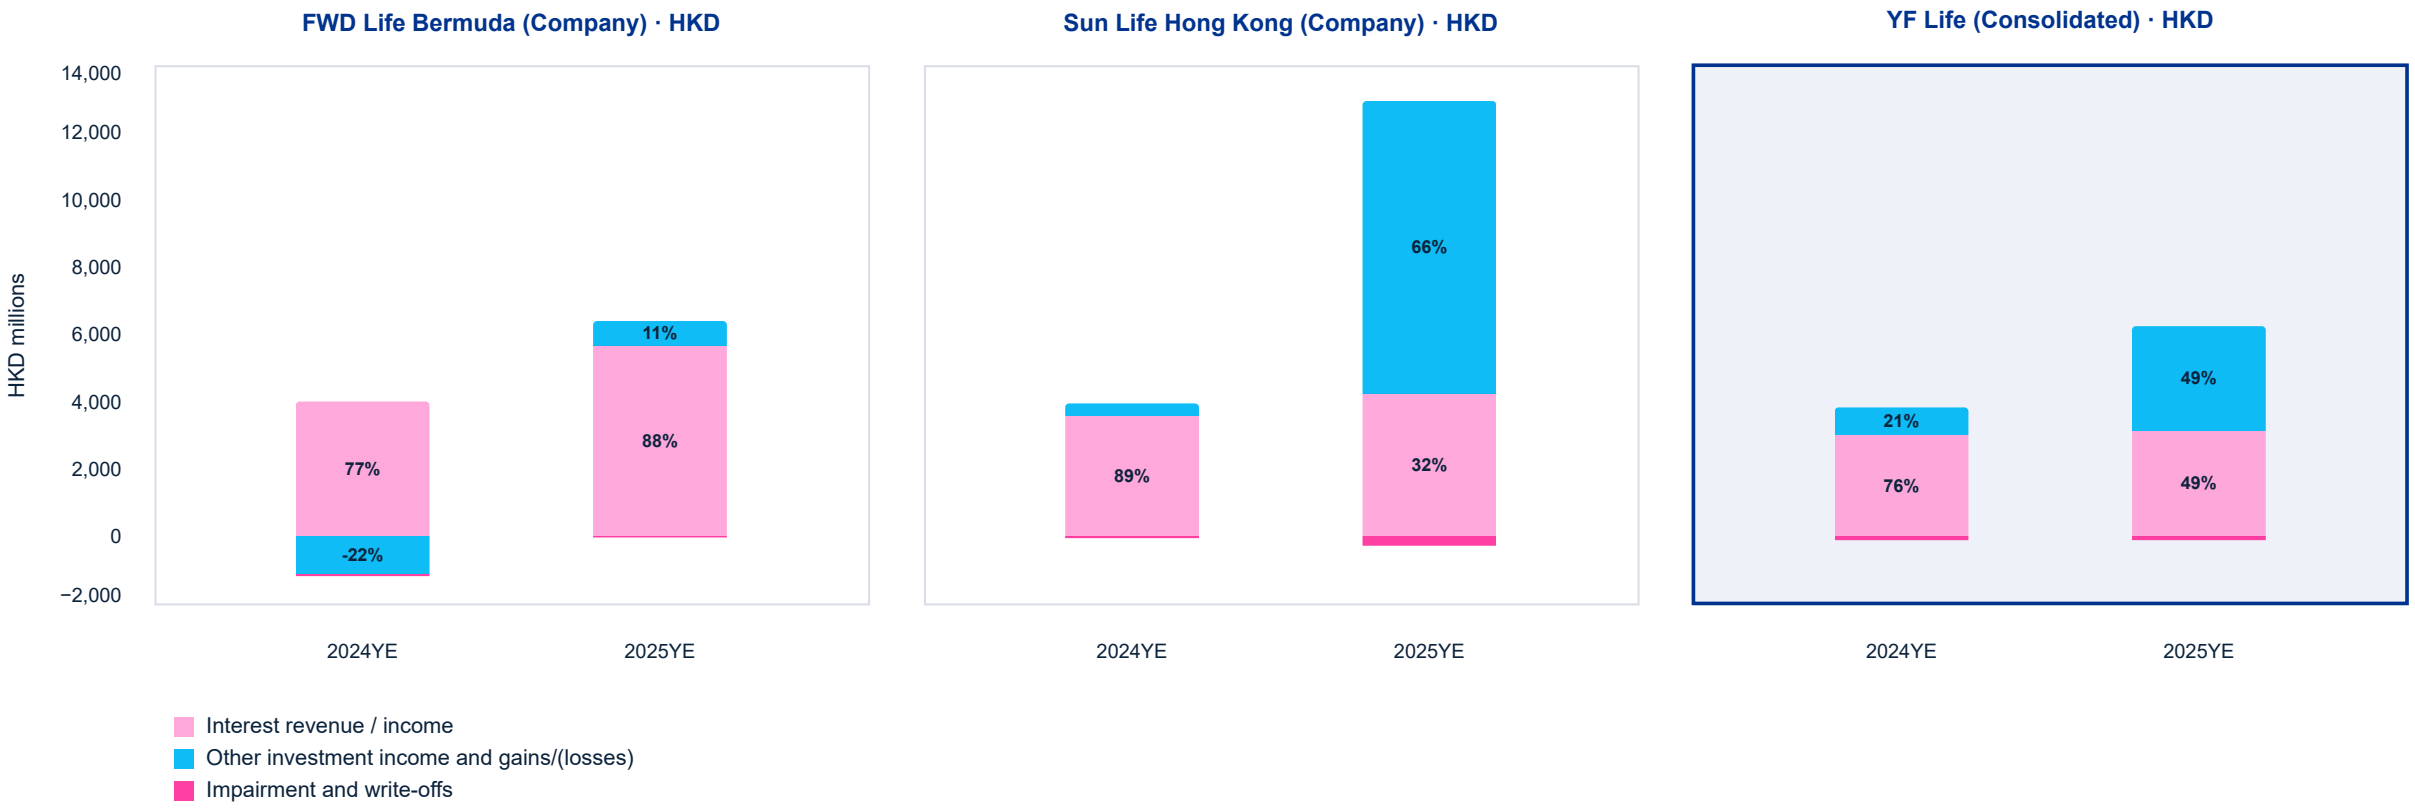

Investment return

P&L investment return excludes OCI; Sun Life Hong Kong uses net investment income, including investment-contract liability movements.

Investment return components

Profit or loss (P&L) only; amounts recognised in OCI are excluded.

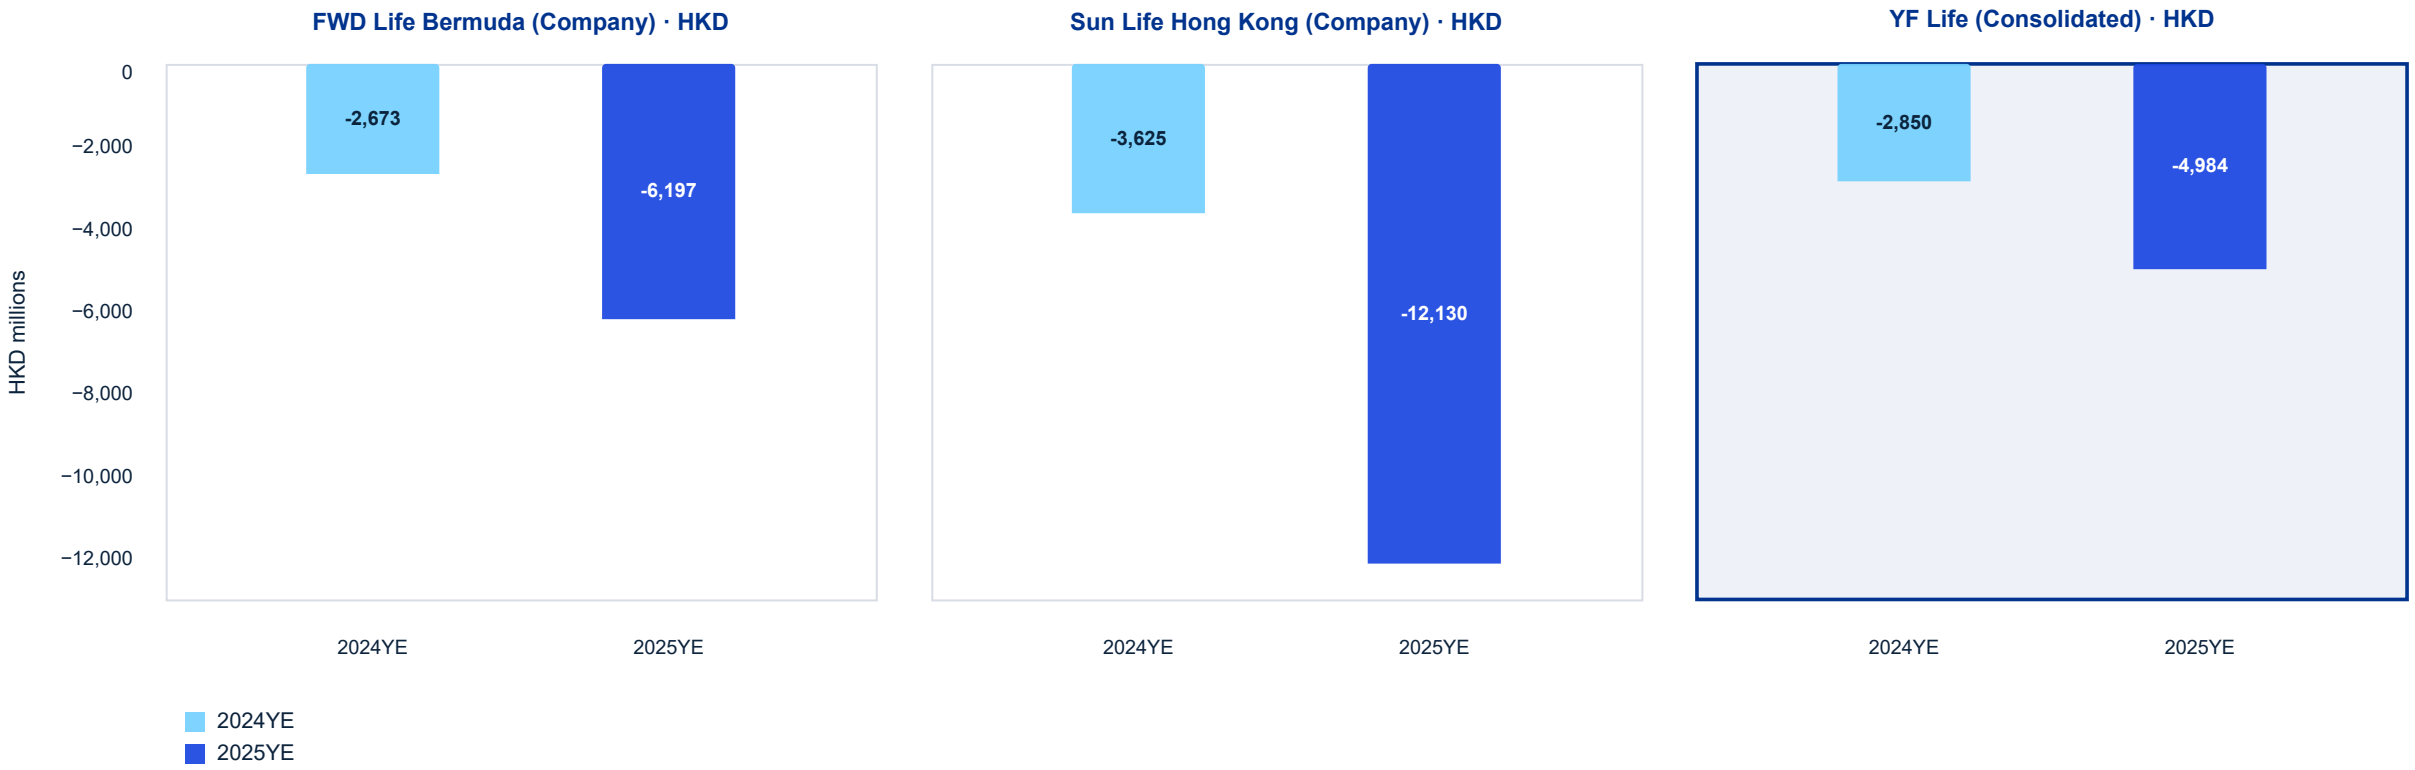

Sun Life's investment-contract liability movement is already within net investment income.

Net insurance and reinsurance finance result

Profit or loss (P&L) only; amounts recognised in OCI are excluded.

Formula: Net insurance and reinsurance finance result (P&L) = insurance contract finance result (P&L) + reinsurance contract finance result (P&L). Negative values are net finance expenses.

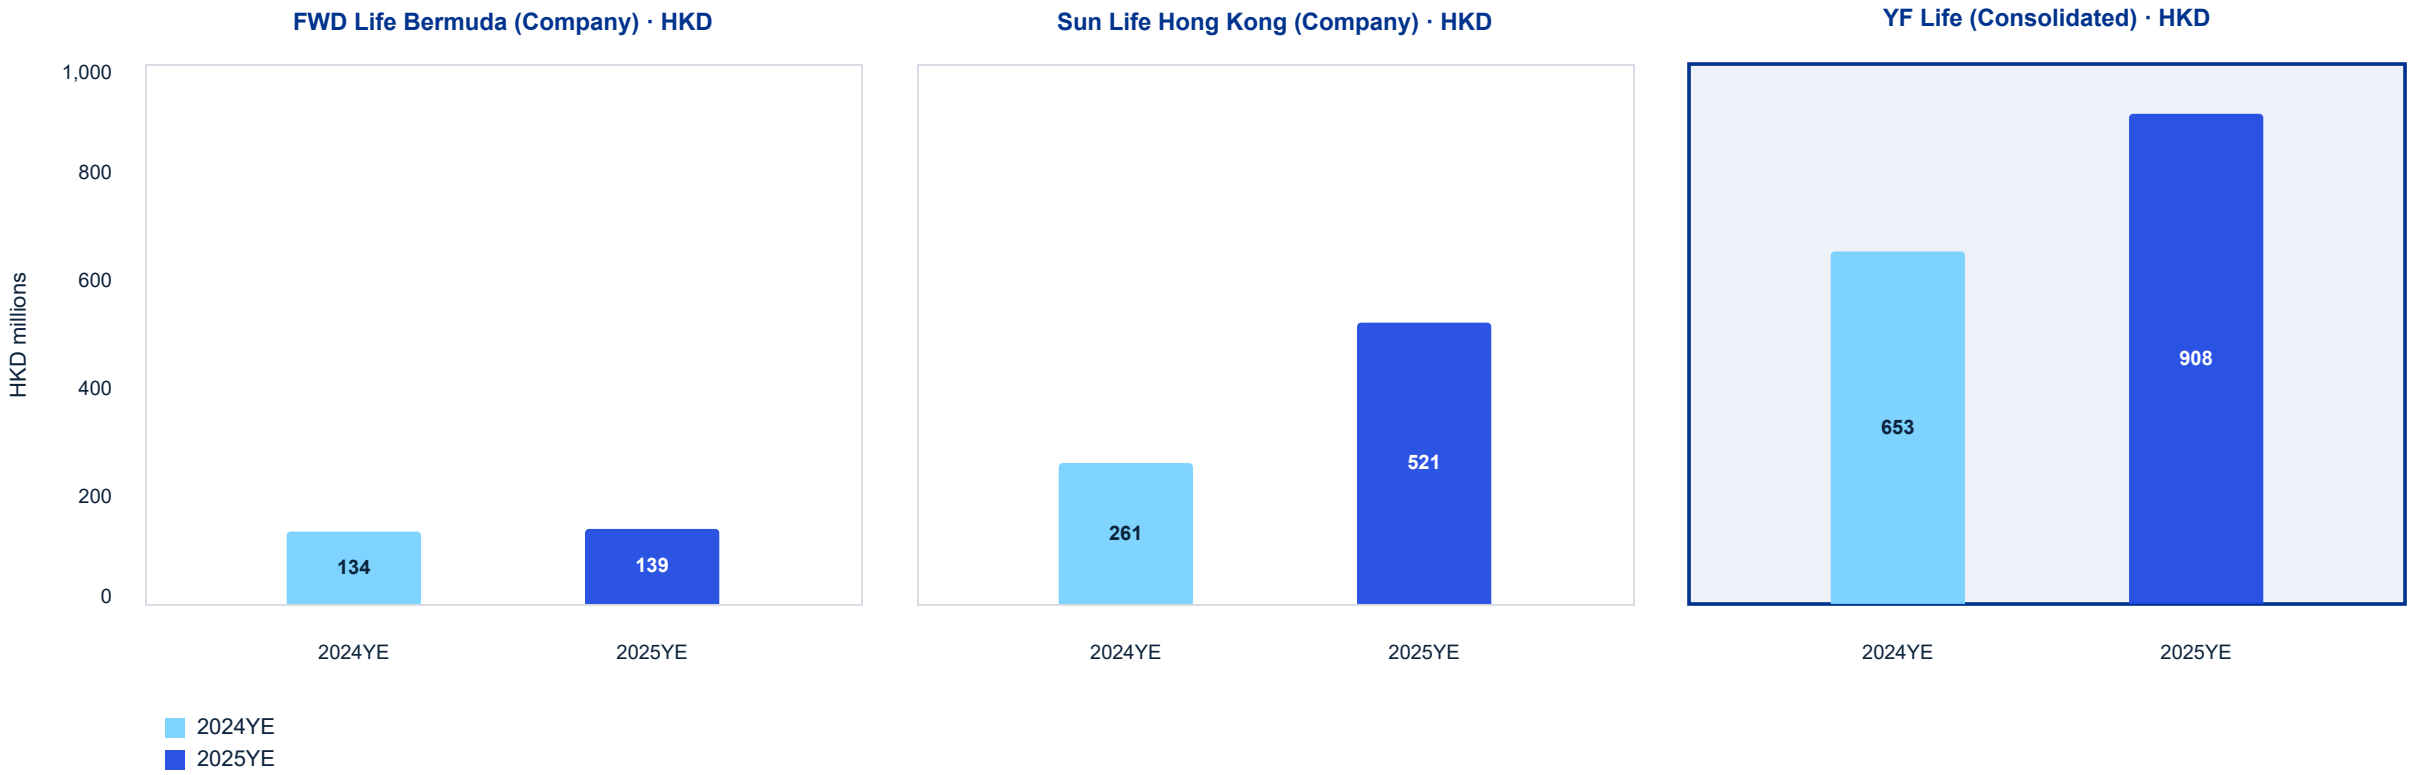

Net investment result

Profit or loss (P&L) only; amounts recognised in OCI are excluded.

Formula: Reported net investment result (P&L) = investment return / net investment income (P&L) + insurance contract finance result (P&L) + reinsurance contract finance result (P&L) + investment-contract liability movement (where separately presented).

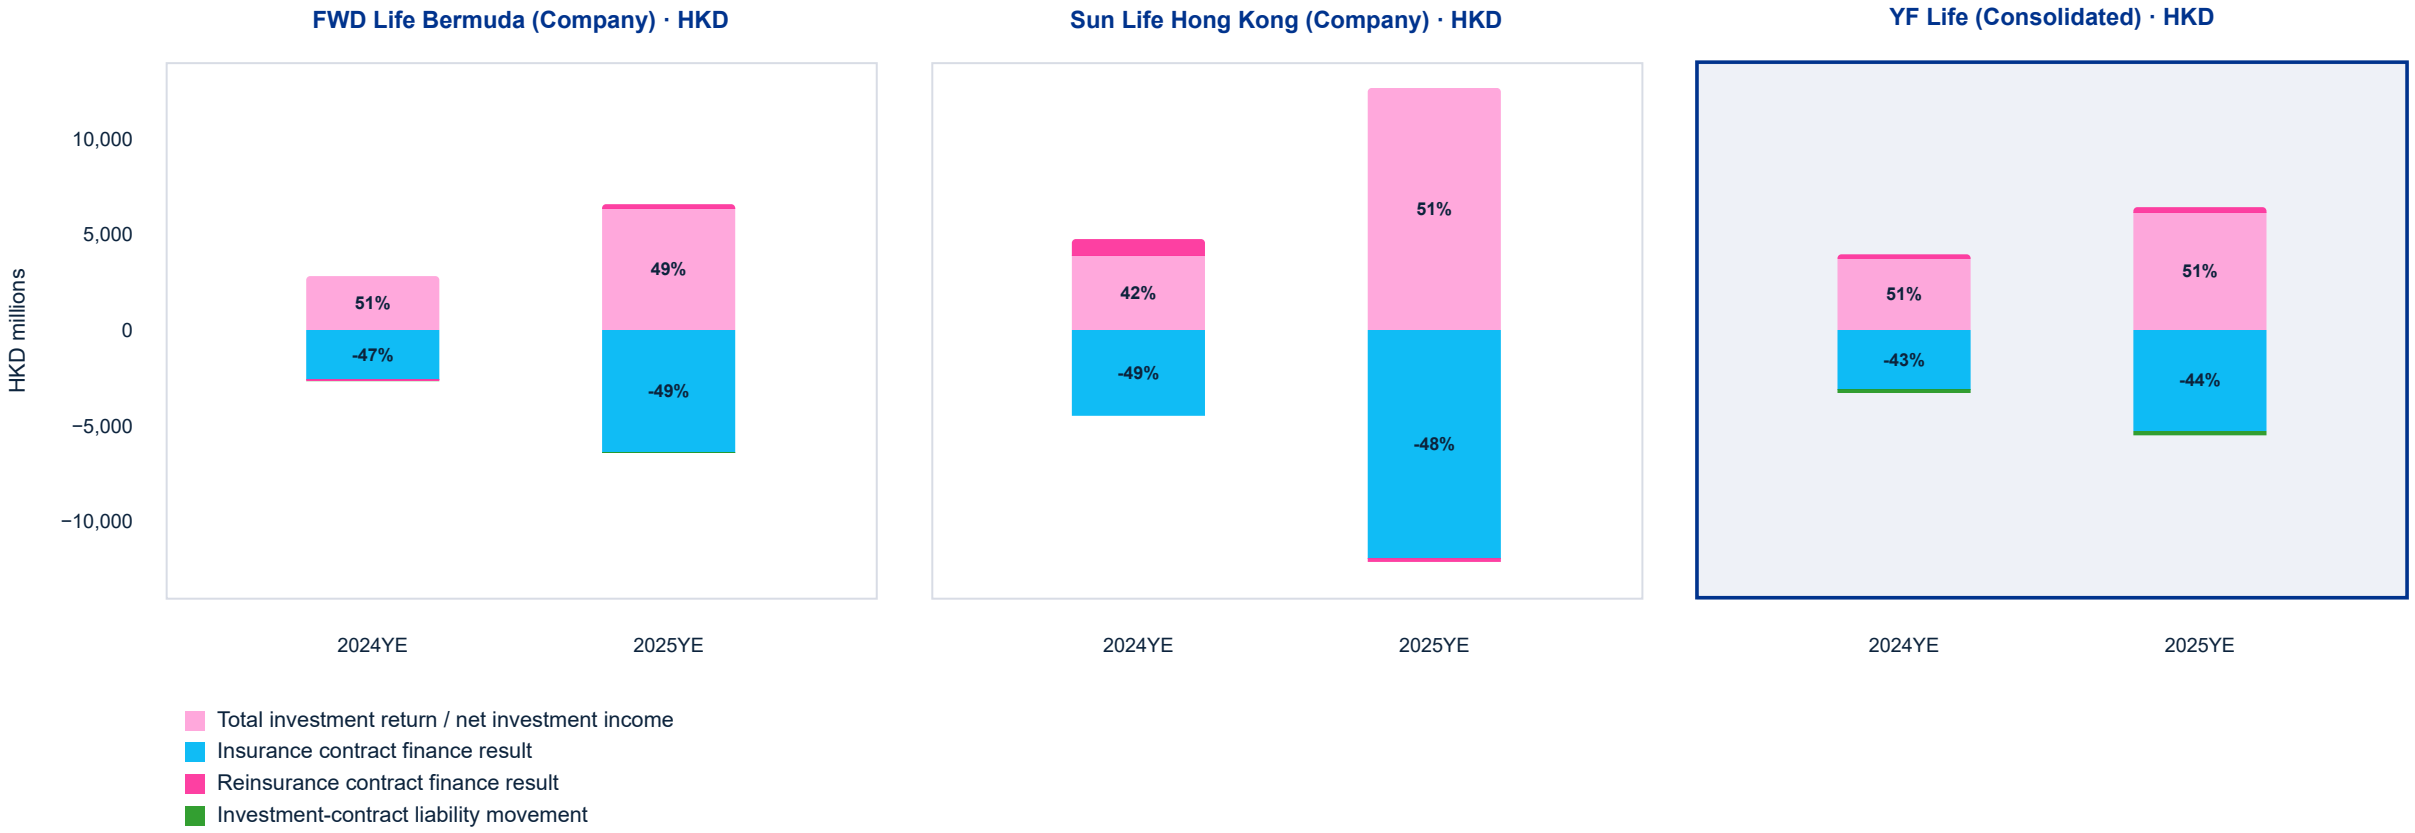

FWD Life Bermuda and YF Life: the three-line subtotal is higher than the reported P&L result because the investment-contract liability movement is negative.

Sun Life Hong Kong: the investment-contract liability movement is already included within net investment income, so it is not added again.

Investment result components

Profit or loss (P&L) only; amounts recognised in OCI are excluded.

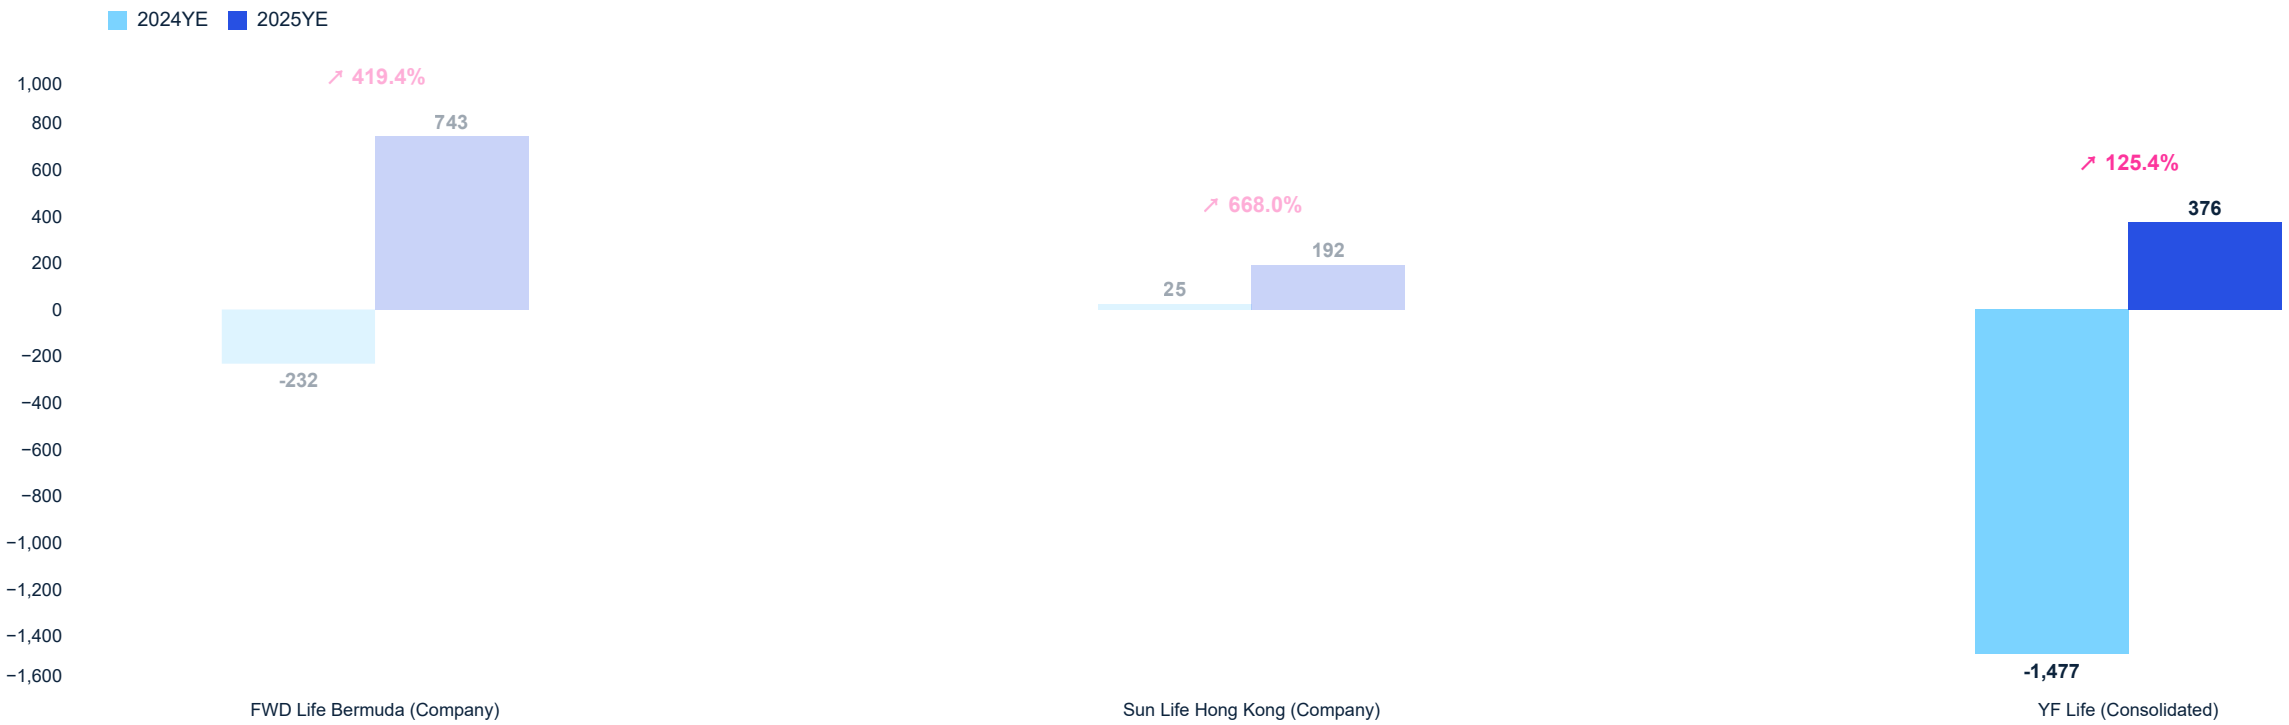

FWD Life Bermuda and YF Life: the investment-contract liability movement is shown separately in the P&L result composition.

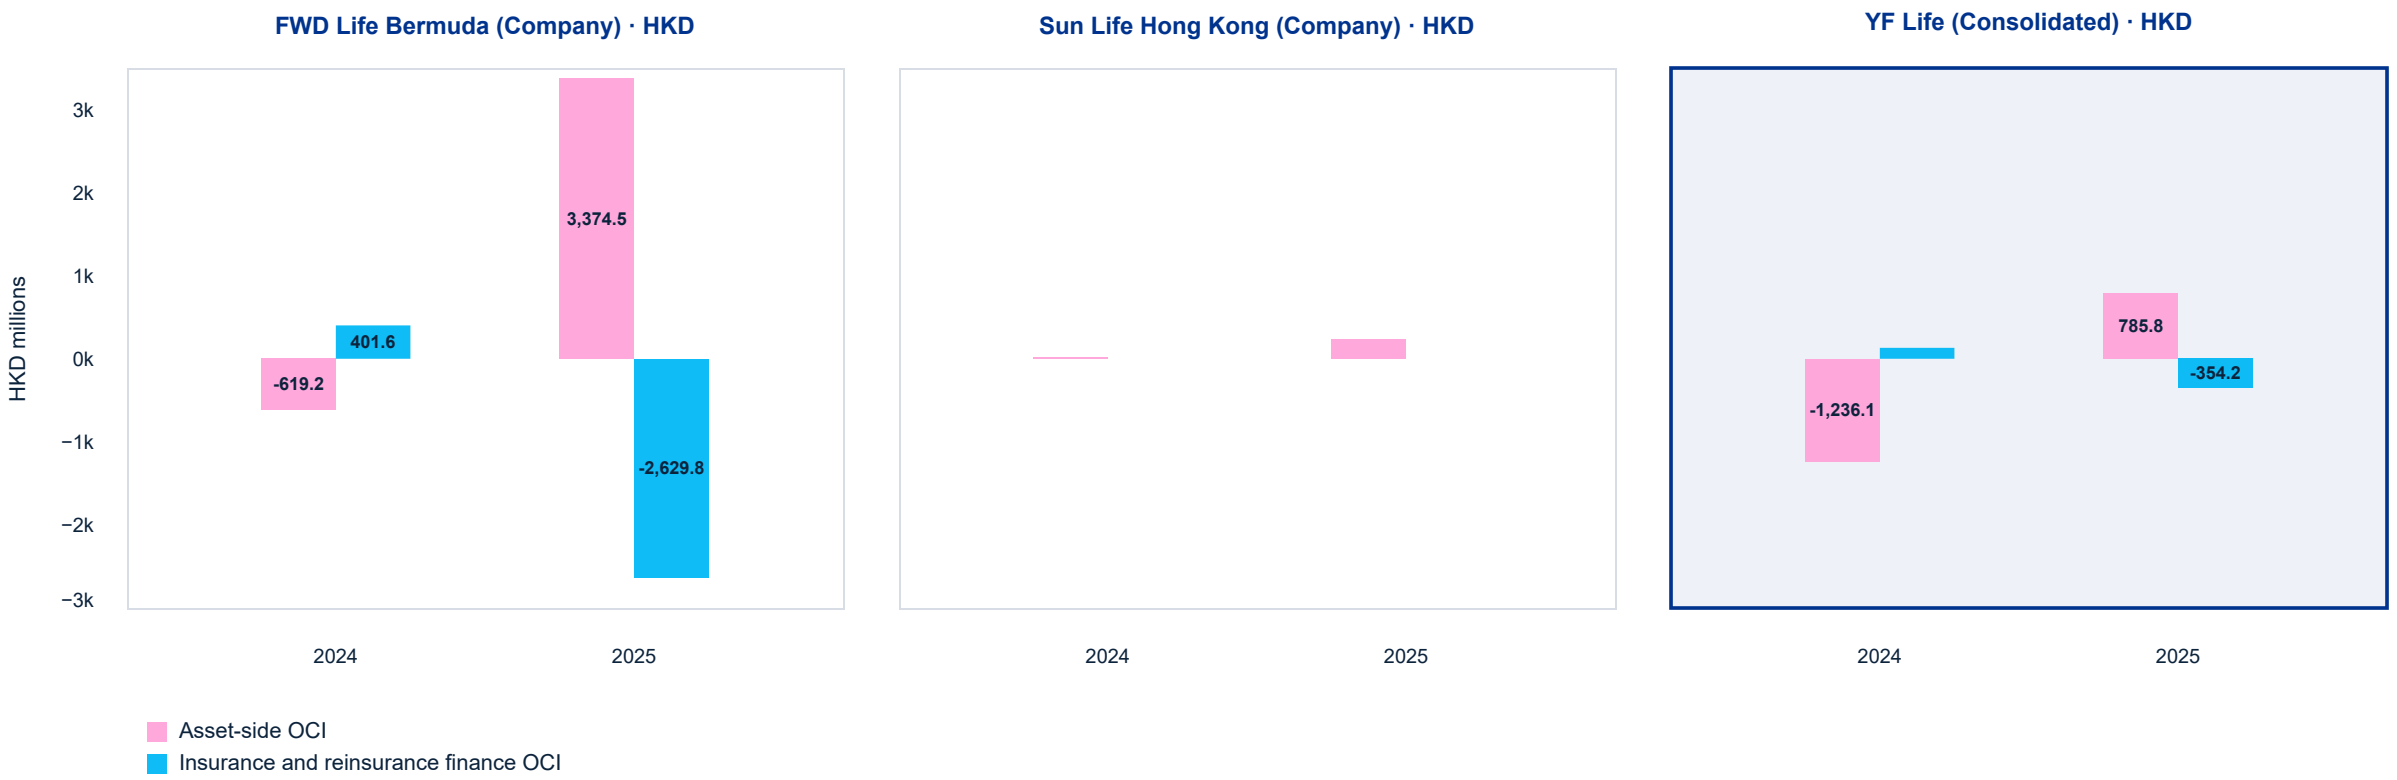

Sun Life's investment-contract liability movement is already within net investment income.

Other comprehensive income

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

Asset and insurance-finance OCI comparison

Year-end FVOCI balance and annual OCI amounts

Item	FWD Life Bermuda (Company)	Sun Life Hong Kong (Company)	YF Life (Consolidated)
FVOCI debt / total assets (2024YE)	57.93%	3.31%	**26.25%**
FVOCI debt / total assets (2025YE)	58.59%	1.59%	**24.60%**
FVOCI debt balance (2024YE, HKD m)	87,174.924	3,865.000	**24,168.520**
FVOCI debt balance (2025YE, HKD m)	110,340.793	2,430.000	**26,360.122**
Total assets (2024YE, HKD m)	150,479.683	116,664.000	**92,063.965**
Total assets (2025YE, HKD m)	188,326.159	152,738.000	**107,155.953**
Asset-side OCI (2024, HKD m)	-619.156	+20.000	**-1,236.051**
Asset-side OCI (2025, HKD m)	+3,374.457	+231.000	**+785.780**
Insurance-finance OCI (2024, HKD m)	+401.637	Not available	**+131.640**
Insurance-finance OCI (2025, HKD m)	-2,629.806	Not available	**-354.226**

Annual OCI amounts are flows; FVOCI debt securities and total assets are year-end balances. FVOCI debt share = FVOCI debt balance / total assets.

FWD Life Bermuda and Sun Life Hong Kong: asset-side OCI includes FVOCI fair-value movement and the P&L reclassification; the latter is shown separately in its source statement.

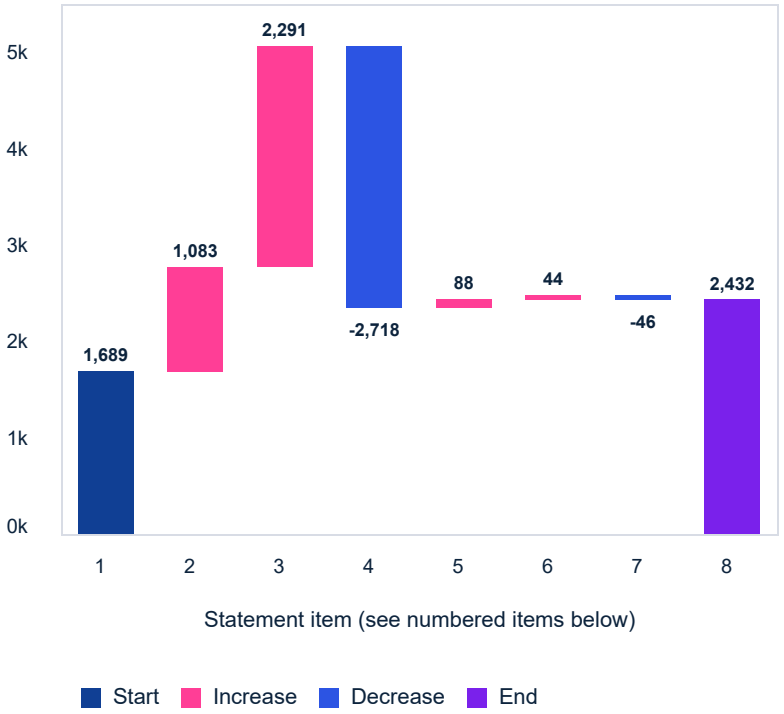

YF asset-side OCI is total investment return recognised in OCI, a broader basis than FVOCI debt movement alone.

Sun Life Hong Kong: insurance and reinsurance finance OCI is unavailable for 2024, 2025; the corresponding bars and table values are left absent, not set to zero.

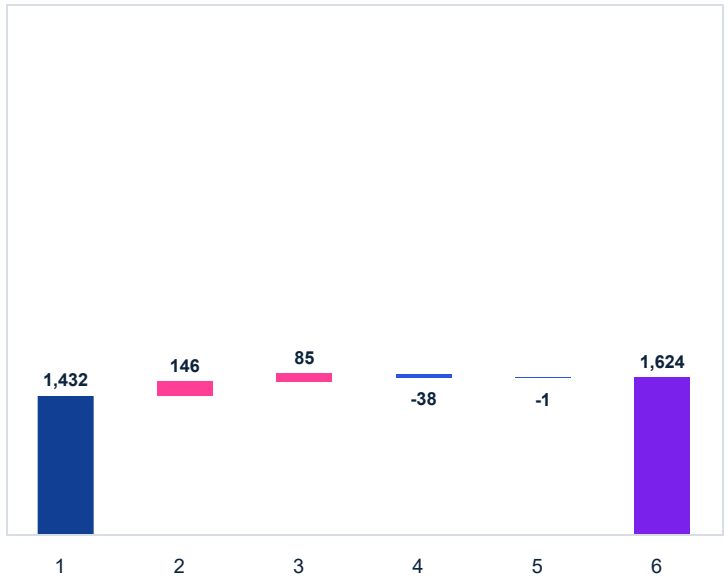

The comparison illustrates accounting OCI offsets; it does not measure duration or cash-flow matching.

Current-year OCI movements

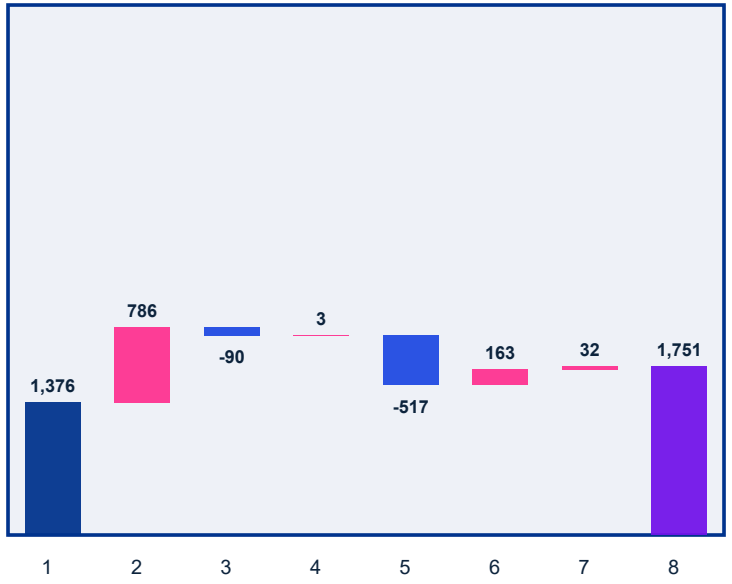

FWD Life Bermuda (Company) · HKD

Sun Life Hong Kong (Company) · HKD

YF Life (Consolidated) · HKD

FWD Life Bermuda (Company) · 2025YE

- **3** Cash flow hedges
- **4** Foreign currency translation
- **5** Insurance finance OCI
- **6** Reinsurance finance OCI
- **7** Deferred OCI tax

Net profit + signed OCI movements = total comprehensive income.

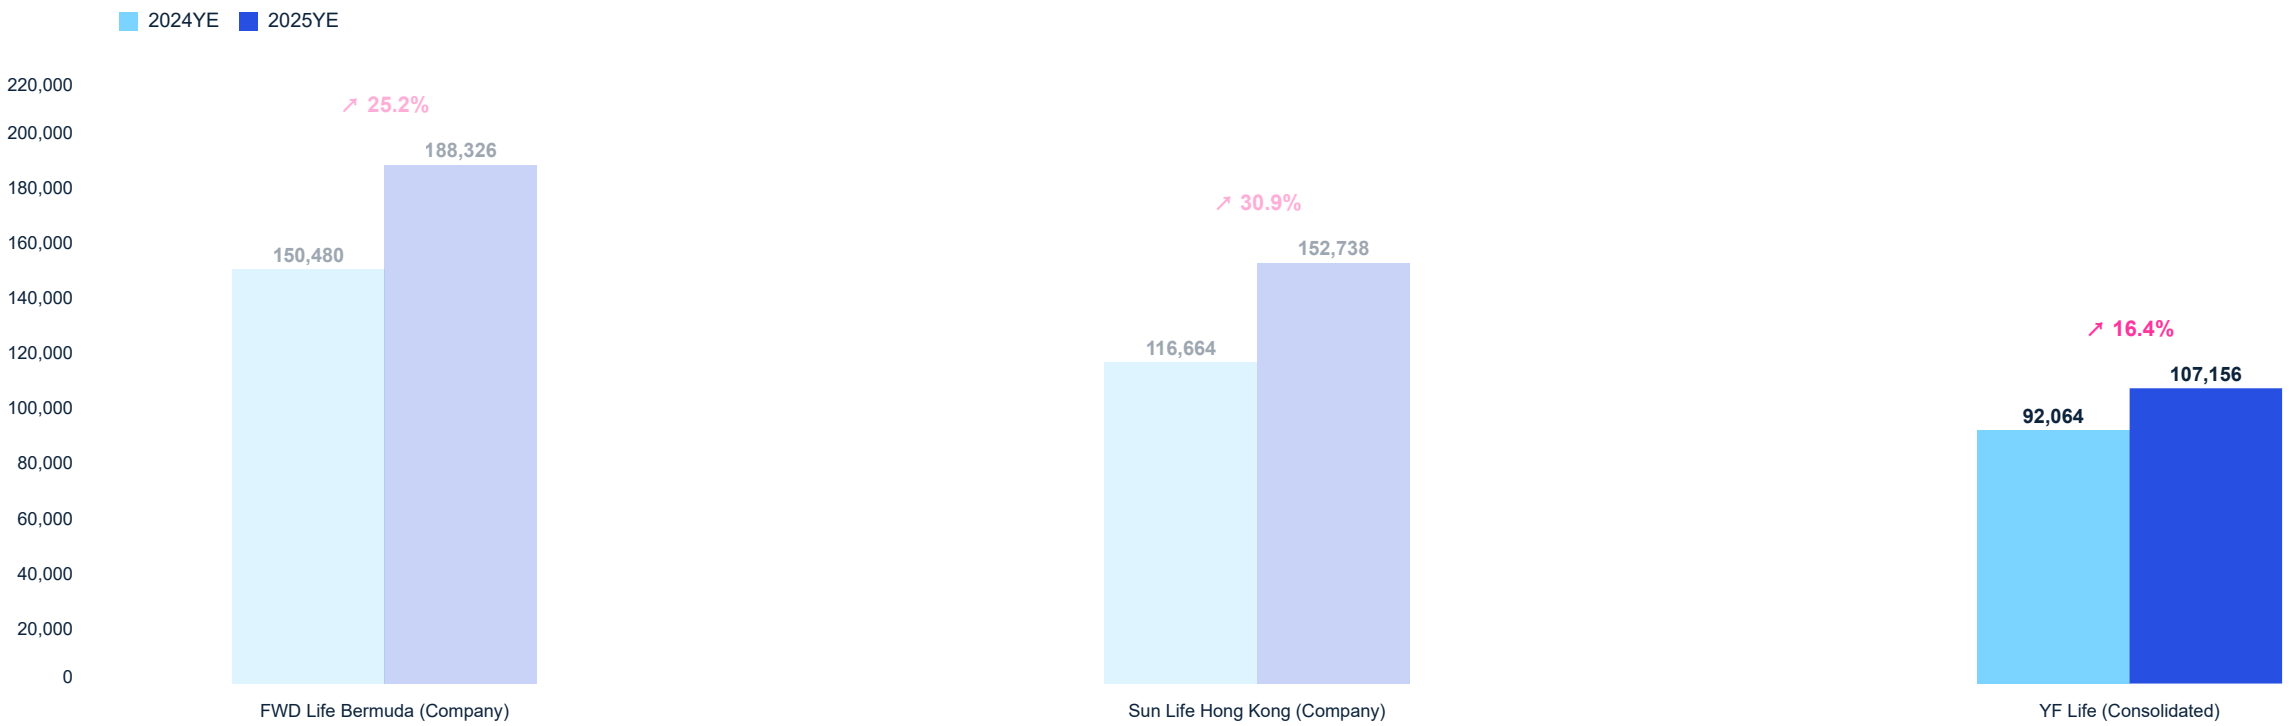

Total comprehensive income

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

Total assets

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

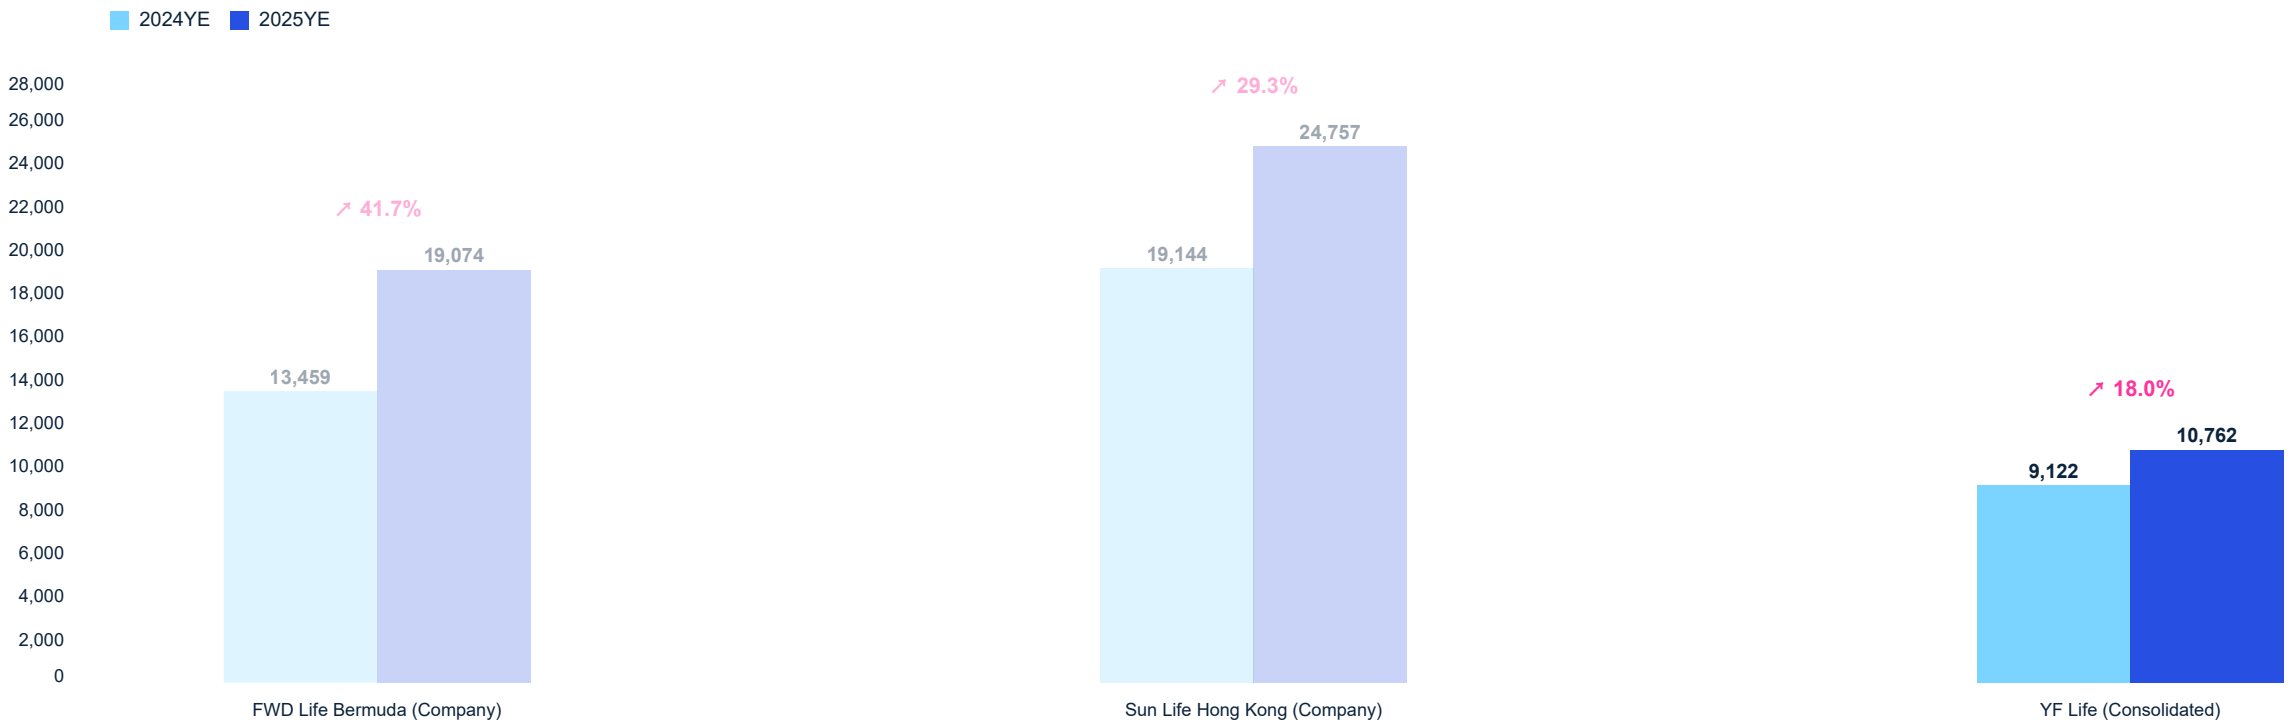

Financial investments by measurement category

Sun Life Hong Kong: FVTPL amounts of 70,331 HKD millions (2024YE) and 93,661 HKD millions (2025YE) are each summed from six disclosed Note 21 lines rather than a separately reported subtotal; AC is not separately disclosed in Note 21.

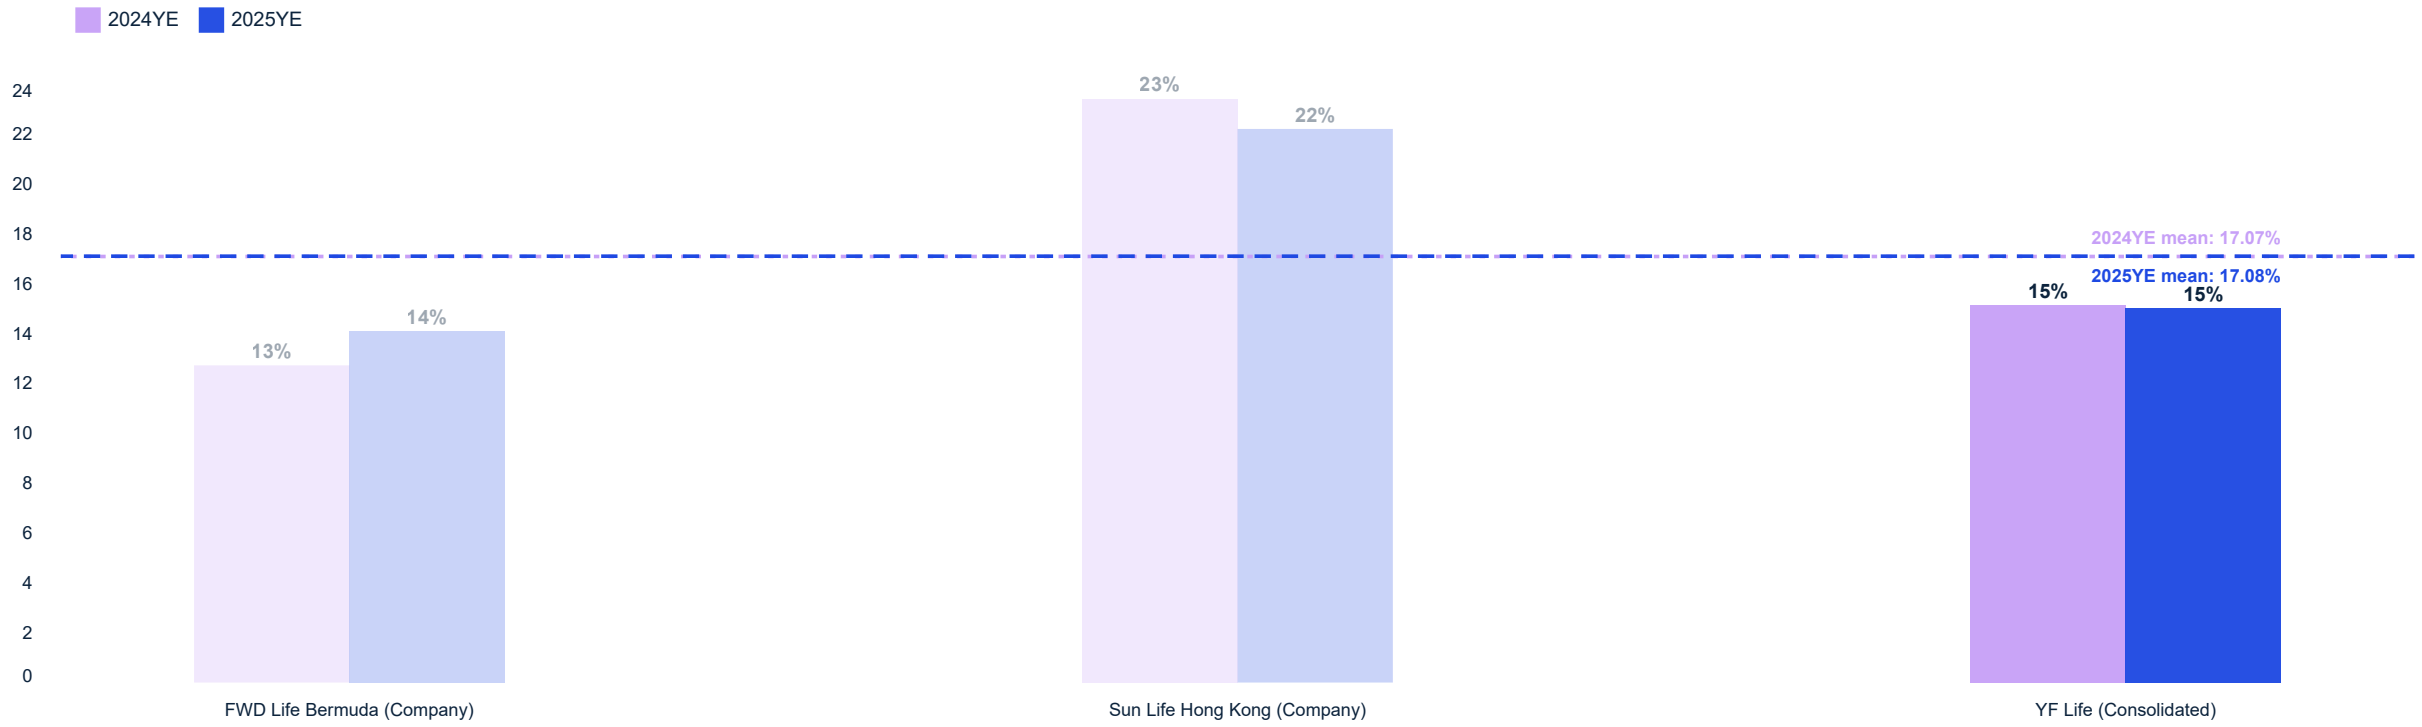

Insurance CSM closing balance

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

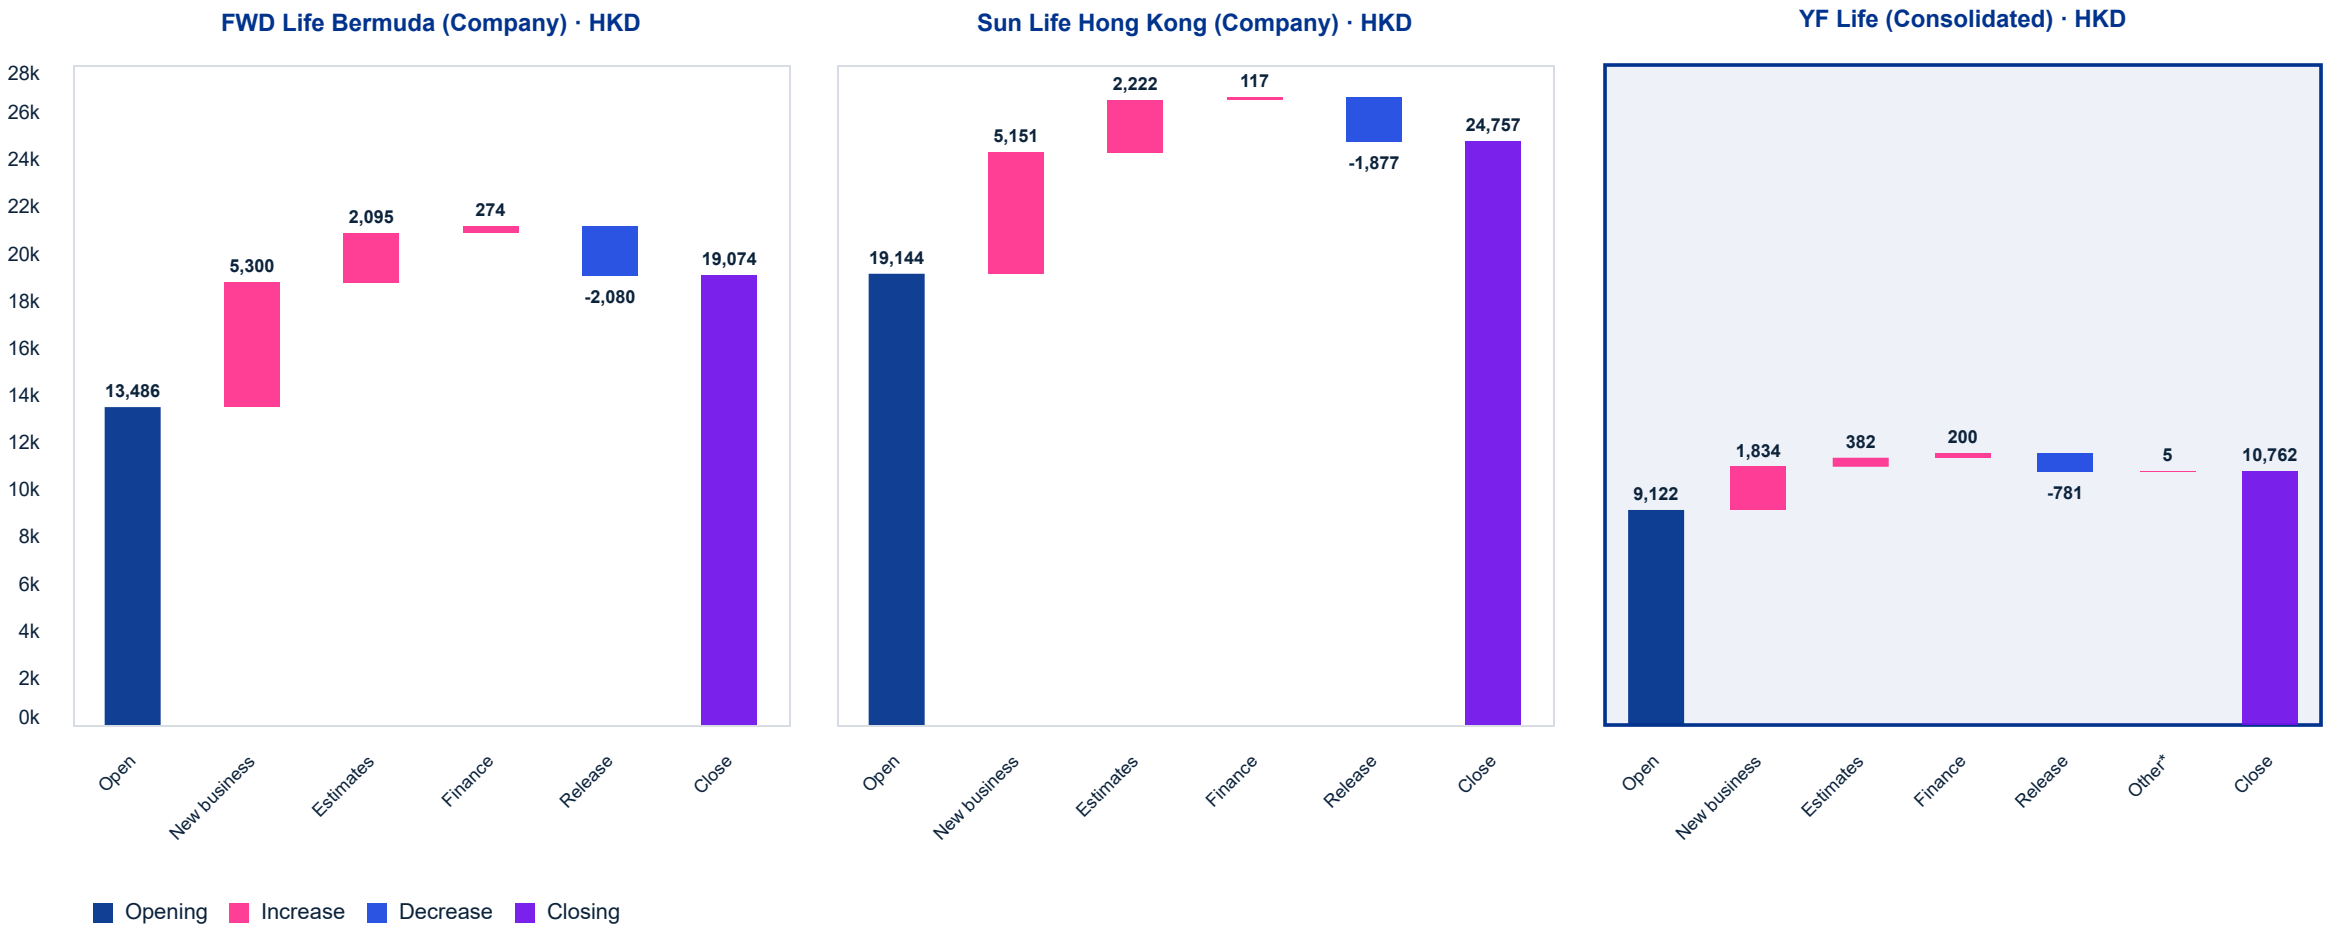

CSM to matching fulfilment cash flows

Formula: |closing non-PAA insurance CSM| / |closing non-PAA present value of future cash flows (PVFCF) + closing non-PAA risk adjustment (RA)| × 100%. All three inputs use the same filing and note page. The denominator is matching fulfilment cash flows, not BEL. Each annual mean is the unweighted average of the displayed insurers with available ratios; check the reporting scope before comparing companies.

Insurance CSM movement

Opening CSM + signed movements = closing CSM. Pink and blue show increases and decreases; navy and purple show the opening and closing balances.

YF Life (Consolidated) 2025YE: Other* is a calculated remainder (closing − opening − the four displayed movements), not a separately disclosed CSM item.

CSM balance roll-forward table

Company	Opening CSM	New business CSM	CSM finance change	CSM estimate change	CSM release	Other movements*	Closing CSM
FWD Life Bermuda (Company) · HKD	13,486.2	5,299.6	273.9	2,094.6	(2,079.8)	0.0	19,074.4
Sun Life Hong Kong (Company) · HKD	19,144.0	5,151.0	117.0	2,222.0	(1,877.0)	0.0	24,757.0
YF Life (Consolidated) · HKD	**9,122.5**	**1,833.6**	**199.9**	**382.3**	**(781.2)**	**4.6**	**10,761.8**

Other movements* = closing CSM − opening CSM − new business CSM − CSM finance change − CSM estimate change − CSM release. This is a calculated reconciliation remainder, not a separately disclosed item. Missing inputs are shown as Not disclosed; no remainder is calculated for an incomplete bridge.

Insurance CSM by disclosed transition category

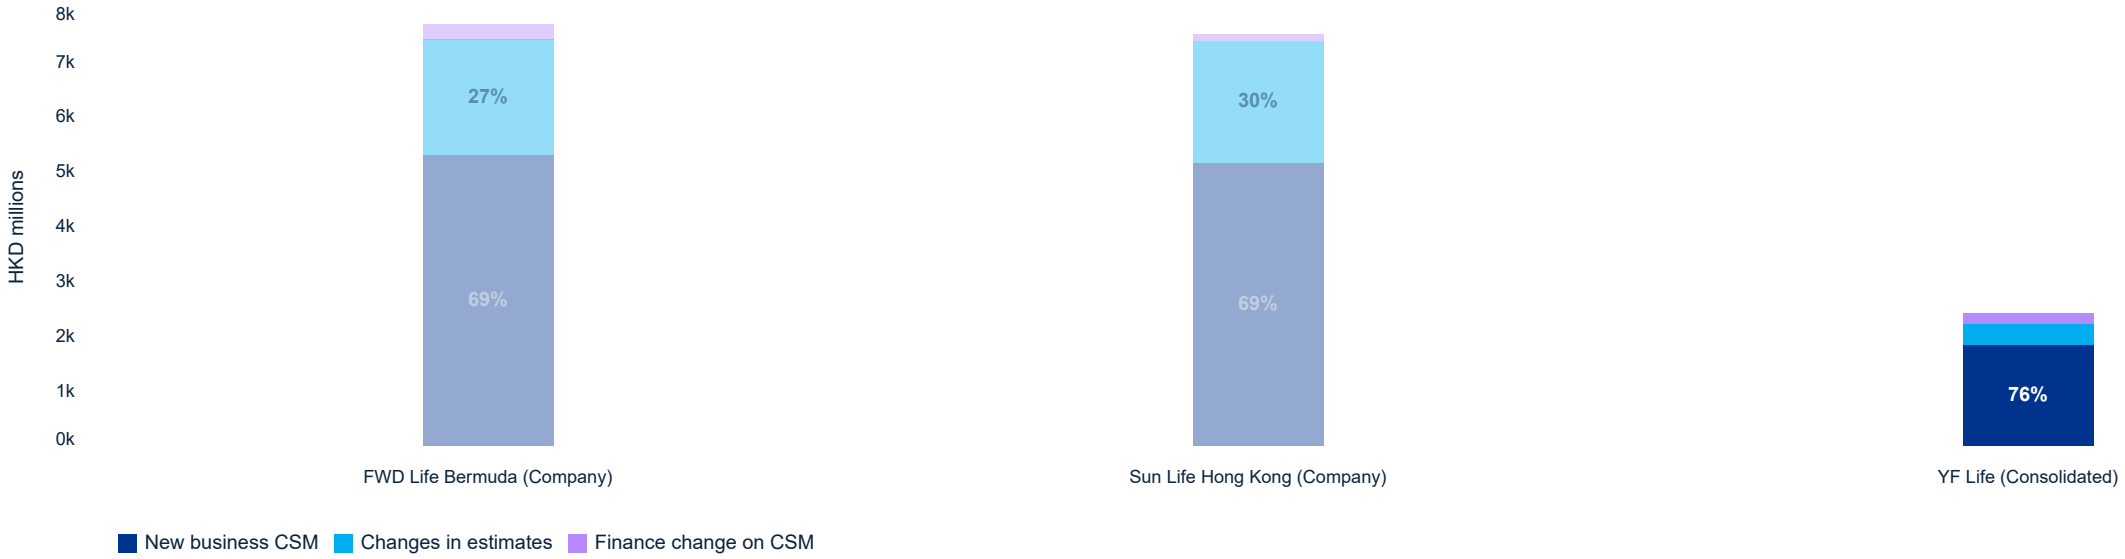

Sun Life Hong Kong 2024YE and 2025YE: a complete insurance CSM category split is not disclosed or does not reconcile to closing non-PAA insurance CSM.

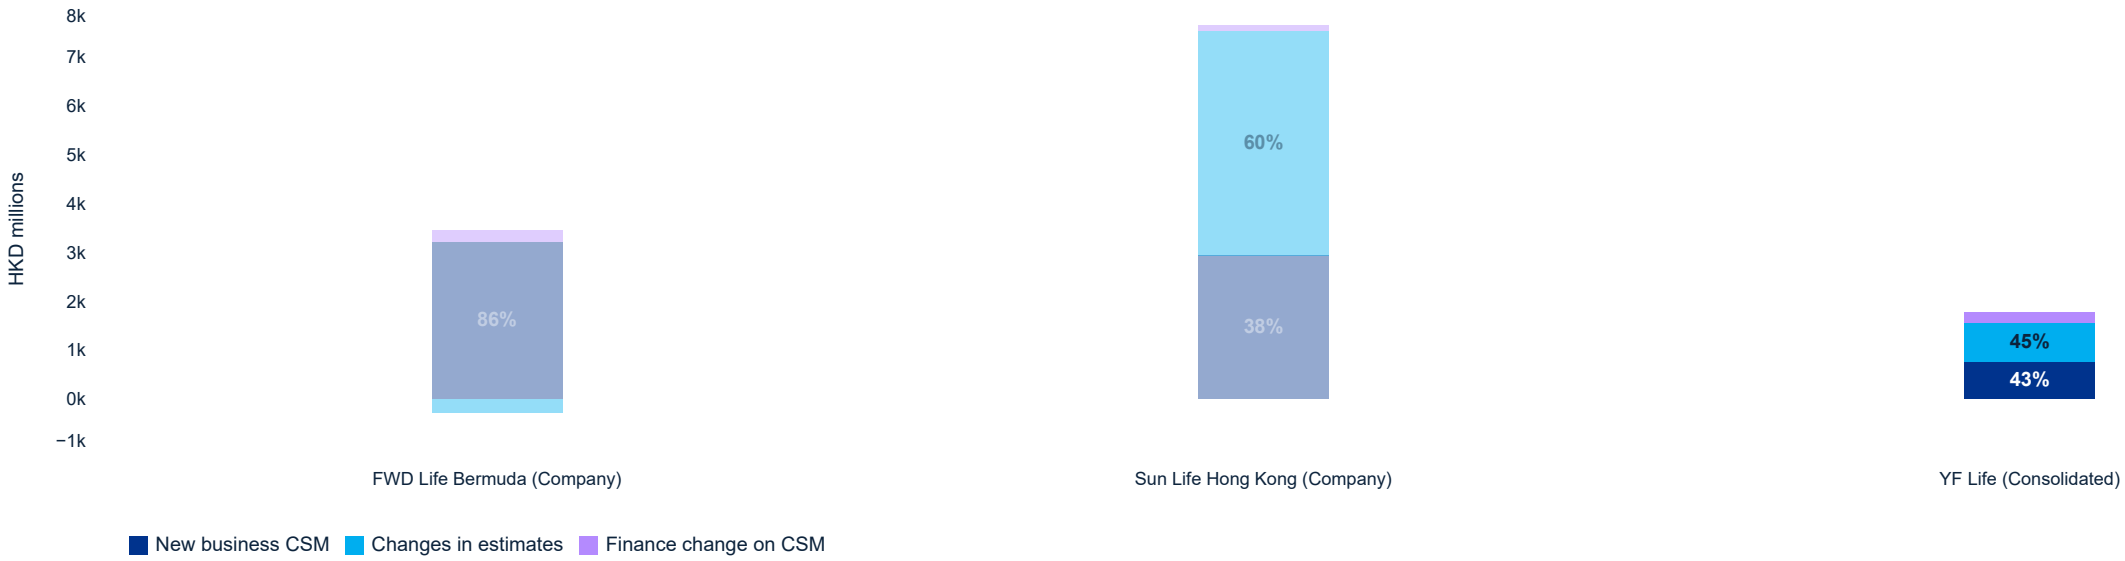

Each percentage is the category's closing CSM divided by matching closing non-PAA insurance CSM. Other insurance contracts are not a transition method. Grey bars mean the complete split is unavailable, not zero; reinsurance held is excluded.

CSM movements before release

2025YE · Current year

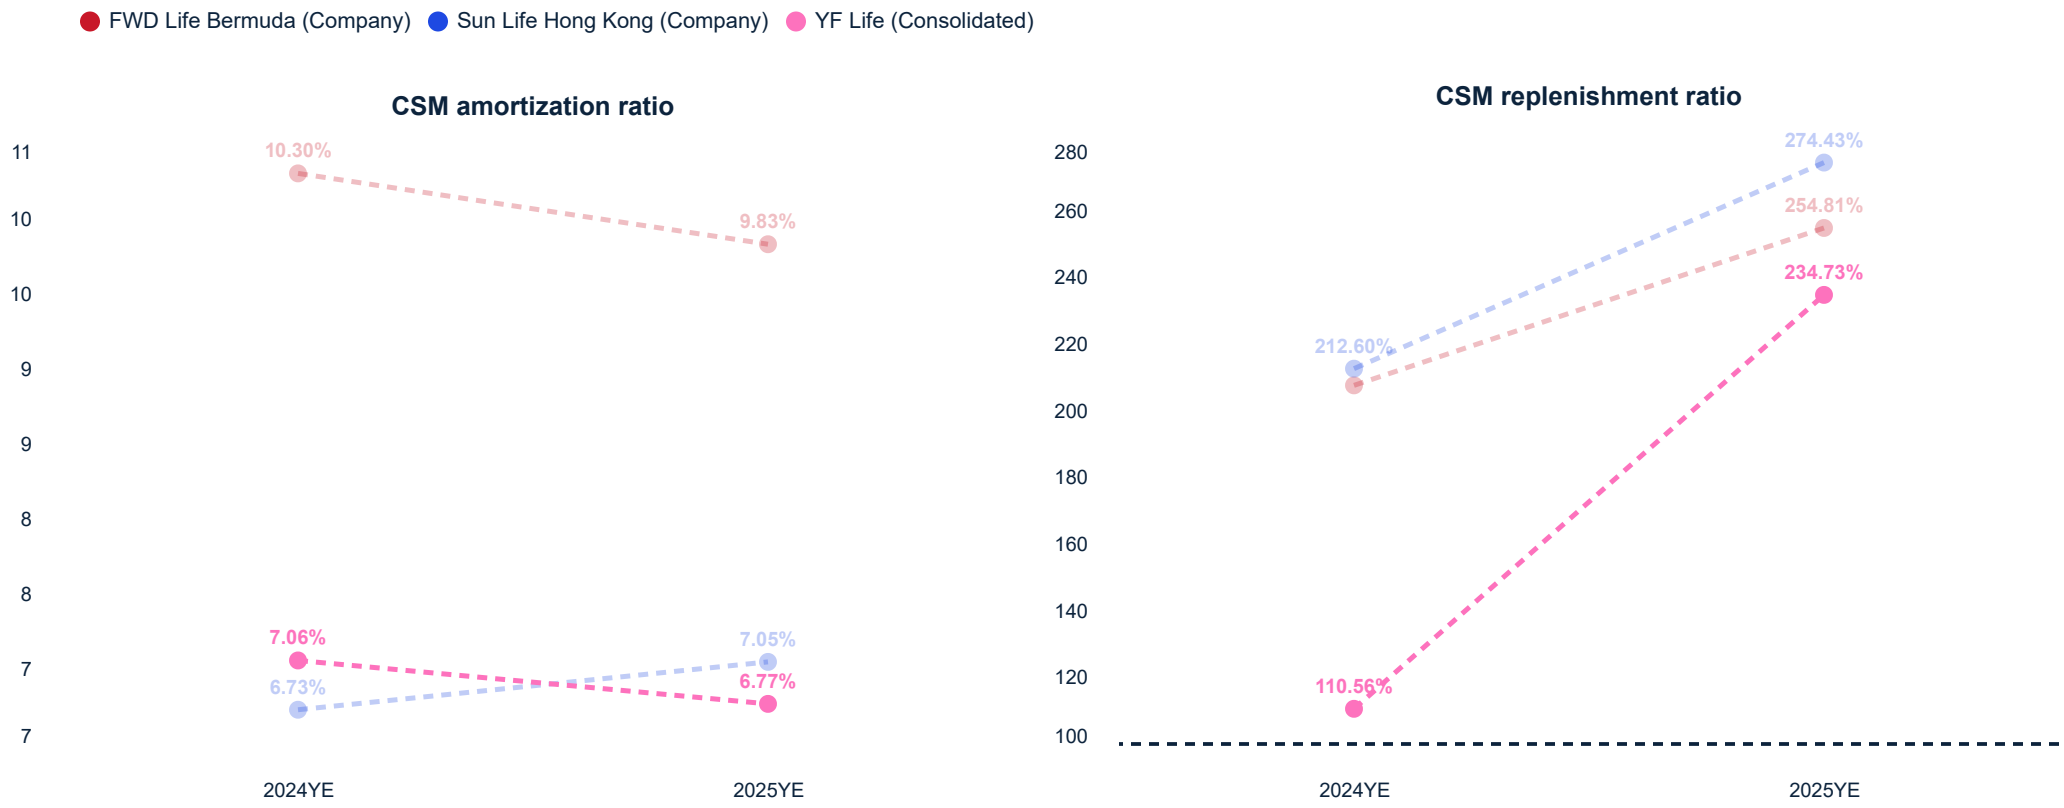

2024YE · Comparative year

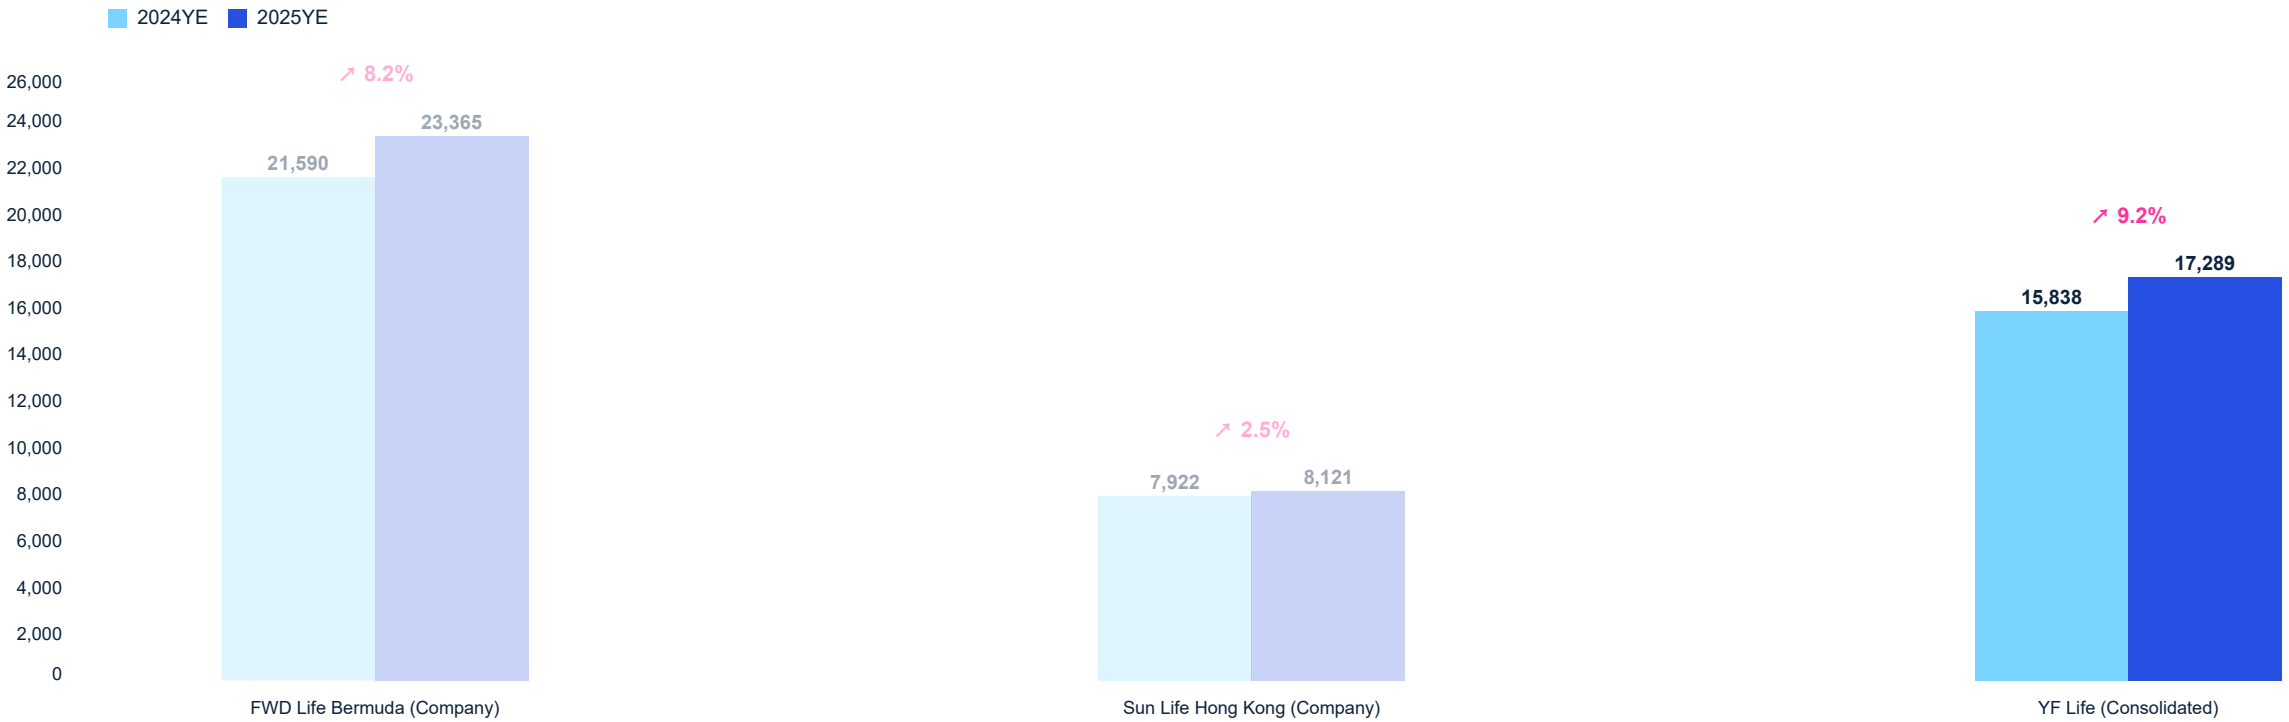

Percentage labels = |item| / (|new business| + |estimate change| + |finance change|) × 100%. Negative items extend below zero. Opening CSM, CSM release and other movements are excluded; these percentages are not shares of closing CSM.

CSM amortization and replenishment trends

CSM amortization ratio = |CSM released for services| / (|closing CSM| + |CSM released for services|) × 100%. CSM replenishment ratio = |new-business CSM| / |CSM released for services| × 100%. The dashed 100% line equals 1×: above it, new business exceeds the year's release. The two panels have separate percentage axes, and point labels use two decimal places. Other movements also affect closing CSM.

Net Assets

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

Net assets = reported closing equity. Growth (%) = (current year-end net assets − prior year-end net assets) / |prior year-end net assets| × 100%, using the same reporting scope. In HKD converted mode, growth includes the USD/HKD conversion effect.

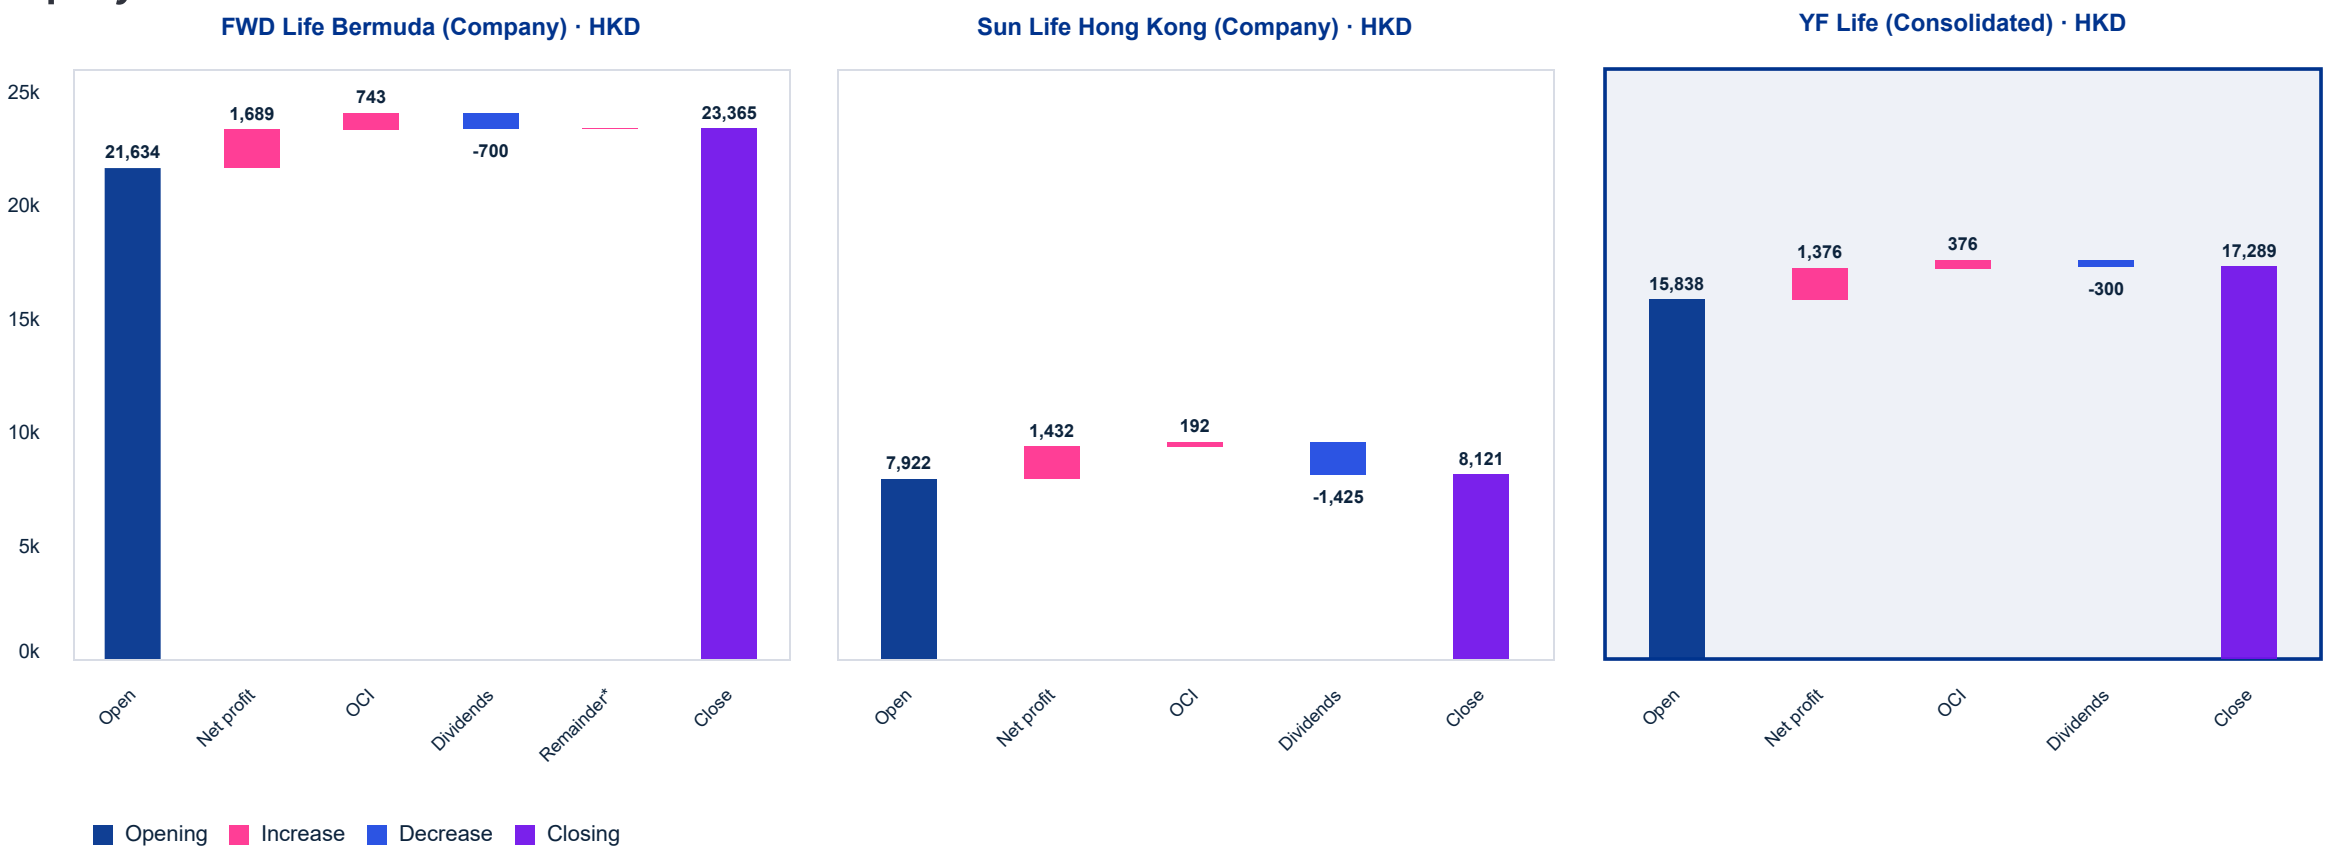

Net assets movement detail table

2025YE · Amounts in millions

No.	Item	FWD Life Bermuda (Company) · HKD	Sun Life Hong Kong (Company) · HKD	YF Life (Consolidated) · HKD
1	Profit for the year	1,689	1,432	**1,376**
2	Other comprehensive income	743	192	**376**
3	Dividends paid	-700	-1,425	**-300**
4	Share capital issued	Not disclosed	Not disclosed	Not disclosed
5	Other disclosed equity movements	Not disclosed	Not disclosed	Not disclosed
6	Unallocated reconciliation remainder*	0.2	0	**0**
7 = sum(1–6)	Net assets movement	1,731	199	**1,451**

Net assets movement = closing equity − opening equity. Remainder* = net assets movement − the sum of displayed profit, OCI and disclosed equity movements; it is calculated, not separately disclosed. Not disclosed means a reviewed line is unavailable, not zero. Bond issuance and subsidiary consolidation are not separately extracted equity lines.

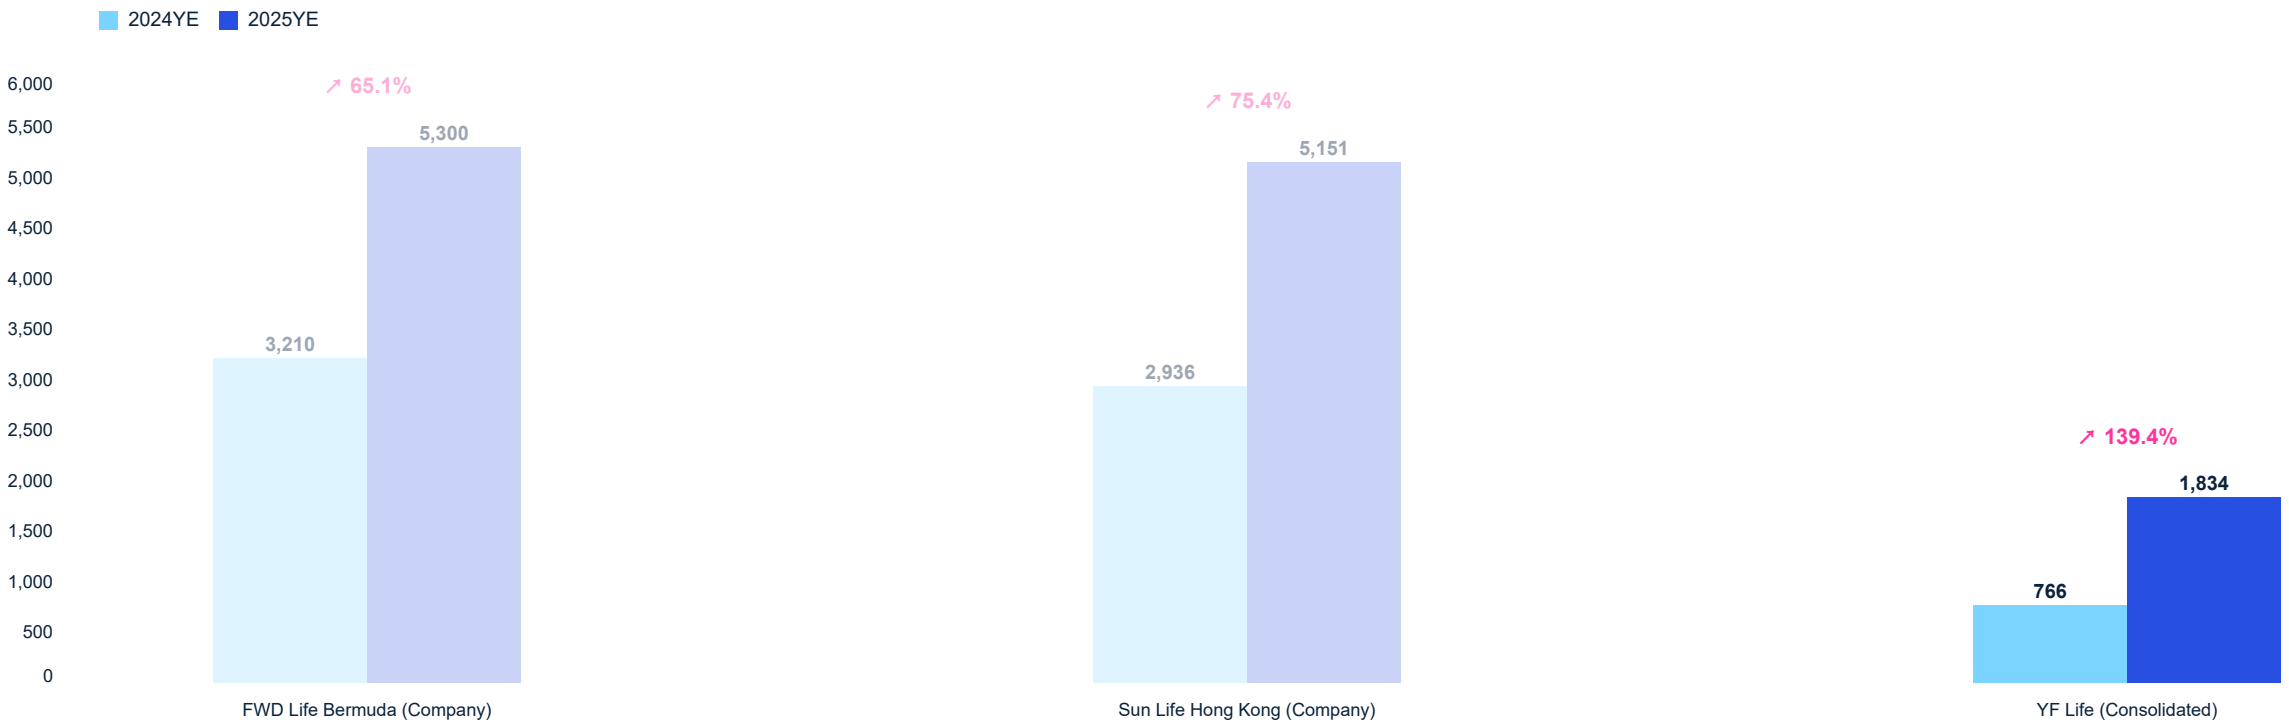

Equity movement waterfall

Opening equity + profit + OCI + disclosed movements + any calculated remainder* = closing equity; the remainder is not separately disclosed. FWD Life Bermuda, Sun Life Hong Kong and YF Life: 2025YE — omitted undisclosed lines: Share capital issued, Other disclosed equity movements. FWD Life Bermuda: 2025YE — remainder* +0.030 USD million; underlying components are unidentified.

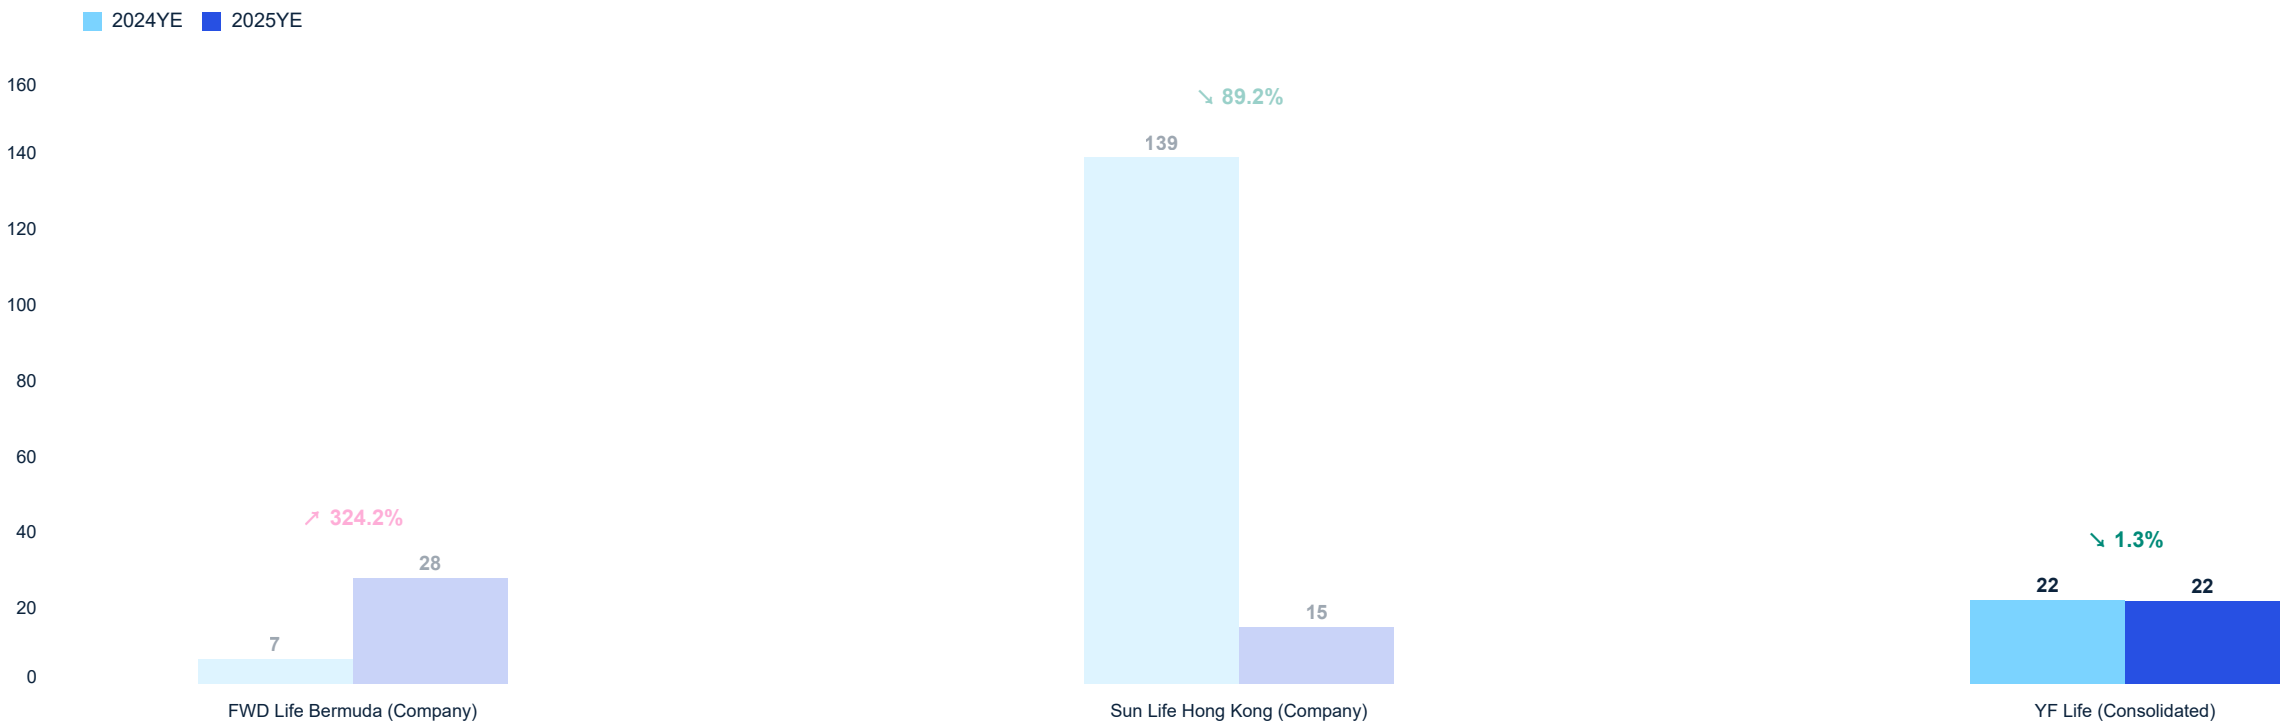

New profitable insurance contract CSM

2025YE vs 2024YE: 3 increased, 0 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

Initial loss component from new onerous business

2025YE vs 2024YE: 1 increased, 2 decreased. Change uses (current − prior) / |prior|; zero or missing prior values have no percentage.

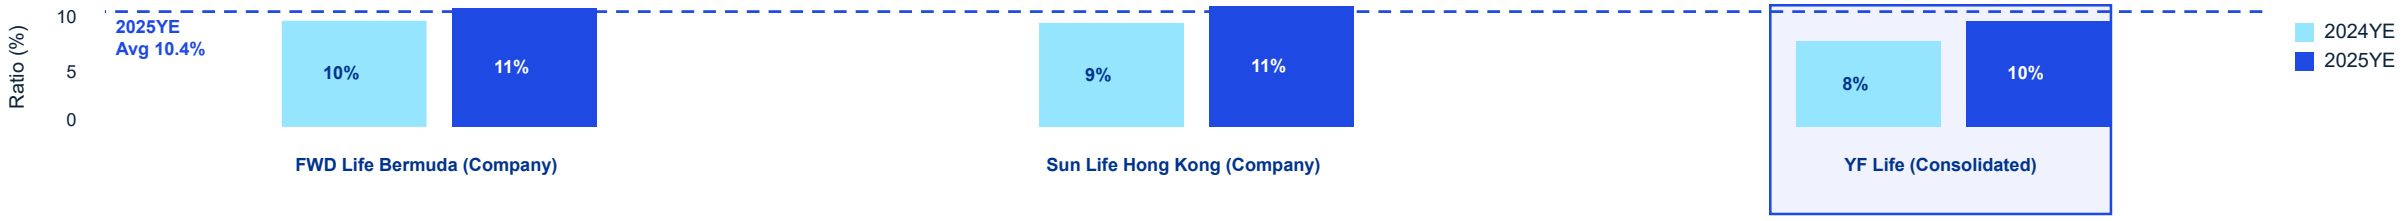

Do not substitute the initial net contract balance or total onerous contract amount for an explicit loss component.

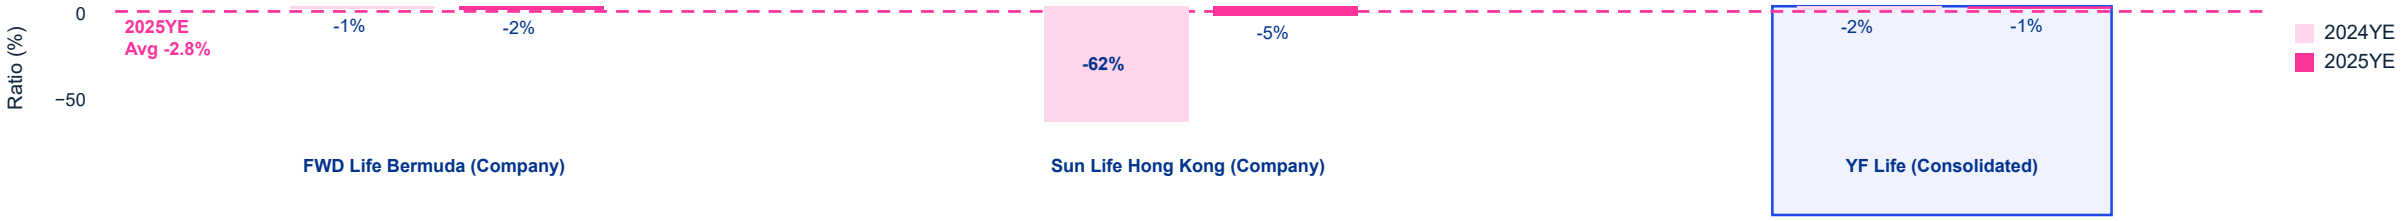

New business value ratios (CSM margin / loss ratio / RA ratio)

CSM margin = |new profitable-contract CSM| / |profitable-contract PV inflows|; loss ratio = −|initial loss on new onerous contracts| / |onerous-contract PV inflows|; risk adjustment ratio = (|profitable-contract RA| + |onerous-contract RA|) / (|profitable-contract PV inflows| + |onerous-contract PV inflows|). All inputs are from initially recognised non-PAA insurance contracts in the same filing and year; reinsurance is excluded.

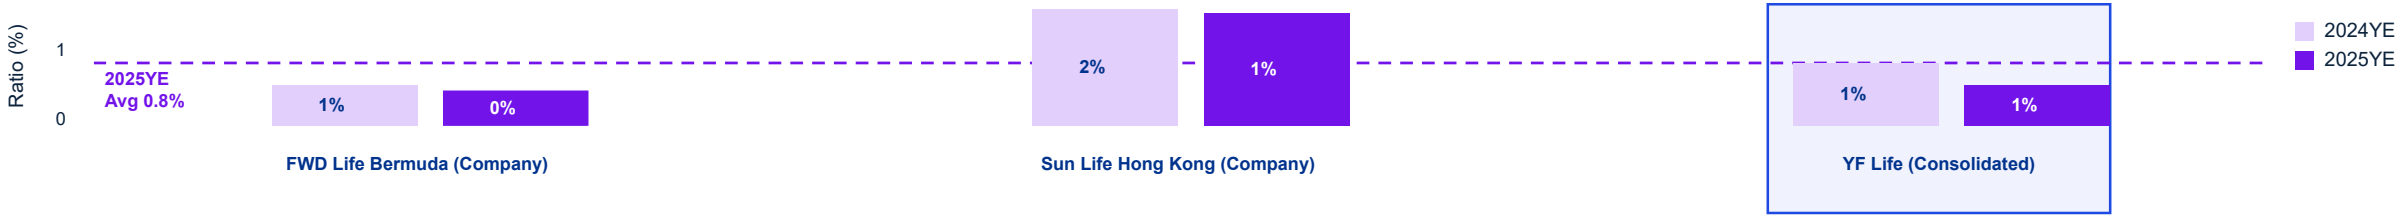

New business CSM margin

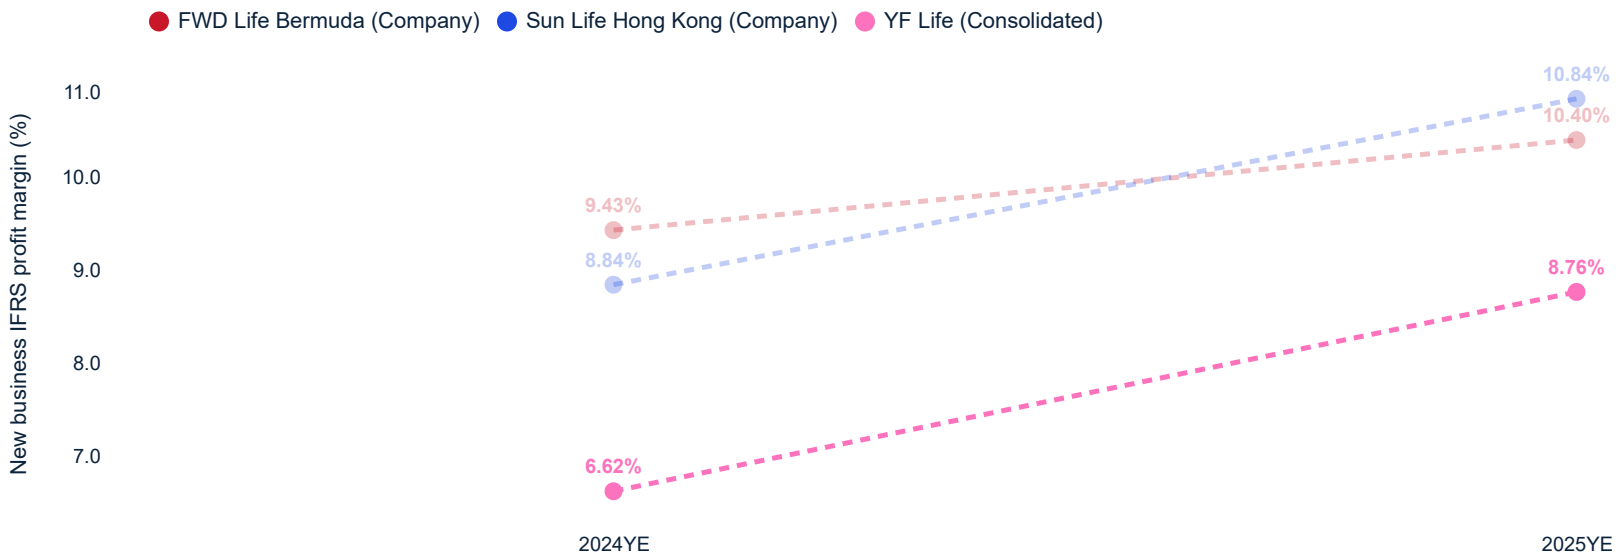

New business loss ratio

New business risk adjustment ratio

New business IFRS profit margin

New business IFRS profit margin = (new-business CSM − initial loss component from new onerous business) / total present value of future cash inflows from new business × 100%. The denominator combines the profitable and onerous non-PAA insurance-contract columns in the same filing and year; reinsurance is excluded. Source signs are converted to magnitudes for CSM, loss component and inflows.

An analytical ratio from disclosed initial-recognition items, not a reported IFRS margin.

Unit: HKD millions

Item	FWD Life Bermuda (Company) · HKD	Sun Life Hong Kong (Company) · HKD	YF Life (Consolidated) · HKD
New profitable insurance contracts: CSM	5,300	5,151	**1,834**
New-business CSM year-on-year growth	64.8%†	75.4%†	**139.4%†**
Initial loss component from new onerous business	(28)	(15)	**(22)**
Total PV of future cash inflows from new business	50,704†	47,378†	**20,679†**
New business IFRS profit margin	**10.4%†**	**10.8%†**	**8.8%†**
CSM replenishment ratio (new CSM / CSM released)	254.8%†	274.4%†	**234.7%†**

† Analytical measure. New business IFRS profit margin = (new profitable contract CSM − initial loss component) / total PV of new-business cash inflows. CSM replenishment = |new-business CSM| / |CSM released|. The initial loss is shown as a deduction; reinsurance is excluded. Ratios use source-currency values, so FX conversion does not affect them. Growth needs a matching prior-year filing.
